KOHLER Expands Tier 3 Diesel Marine Generator Lineup

New 32EKOZD/28EFKOZD and 40EKOZD/35EFKOZD models integrate KOHLER diesel engines

KOHLER, Wis. – Kohler, a global leader in power systems, is expanding its lineup of marine generators with the addition of new 1- and 3-phase models featuring KOHLER Tier 3 diesel engines. The just-launched

32-40EKOZD/28-35EFKOZD diesel marine generators integrate new and improved sound shields to deliver quiet performance on the water as well as the company's Decision-Maker 3500 controller (DEC3500), which provides advanced control, systems monitoring, and systems diagnostics for optimum performance and compatibility.

“These new generators help round-out our expanding lineup of Tier 3 models powered by KOHLER diesel engines,” said Greg Klompenhouwer, senior product manager for KOHLER marine generators. “Smaller units within this family – launched a couple of years ago – have proven to be popular among boat builders and pleasure craft owners. So, we anticipate similar response to these larger models, which offer the same performance-enhancing features and overall reliability. It’s always rewarding to expand a product line based on widespread demand and rapid acceptance in the market.”

One of the most highly-regarded features of KOHLER marine generators with the DEC3500 controller is the ability to quickly and easily parallel two or more KOHLER generators with a single communication wire. The controller’s space-saving design eliminates the need for oversized switchgear while its built-in load management software removes over-fueling issues and the need for exhaust treatment systems.
