

Why choose GREENGUARD Certified?

- Babies and children spend approximately 85% of their time indoors¹, and indoor air can be 2-5 times more polluted than outdoor air².
- Poor indoor air quality may contribute to the development of allergies and/or respiratory health issues.
- Products that are GREENGUARD Certified have undergone rigorous testing to ensure they have low emissions of various indoor air pollutants.
- Items featuring the GREENGUARD Certification mark help manufacturers, retailers and consumers identify products that meet established indoor air quality standards backed by a rigorous third-party certification program.
- GREENGUARD Certification is voluntary for manufacturers that want to demonstrate their commitment to improving indoor environments.
