

ECHLIN®

Did You Know?

Issue

Relay Connector

Availability of connector for adding in line or replacing a broken connector for most ISO type relays {5 spade-Bosch style relays such as the AR-201 amd AR-204}.

Solution

NAPA Echlin has introduced two choices for the technician to use. EC-23 is a plain universal connector which fits plain and skirted relays. The EC-38 has the same universal application, but has a mounting bracket on it.

Application

EC-23 universal ISO relay connector, five wire, fits plain and skirted relays.

EC-38 Bosch style five wire relay connector with mounting bracket

NAPA Echlin

LOOKS RIGHT. FITS RIGHT. PERFORMS RIGHT.
