

SPEED-PRO® PRO SERIES RINGS

Speed-Pro® Pro Series rings, designed for the professional racer, offer features that maximize horsepower, including:

- Reduced widths and radial wall thicknesses in the top and second rings for lower tension and enhanced sealing
- Plasma-moly facing on the top ring for instant seating and long life
- Cast iron second rings, with tapering face profile and open-gap design for lower inter-ring pressure buildup and excellent oil control at even the highest RPMs.

Pro Series rings include a very low-tension, thin-profile version of the SS-50® oil rings with a wire latch mechanism to simplify installation.
