

CRANKSHAFT REBUILDERS, INC.

A Quality Crankshaft Solution:

Crankshaft Rebuilders specializes in the remanufacturing of automotive and light truck crankshafts for both domestic and import vehicles. It is our intention to provide a complete product that guarantees the return business of your clientele. Strict quality control standards and the latest technological advances are combined to ensure and secure that all production expectations are met.

Crankshaft Kits

Precision ground to aftermarket specifications and tolerances. Our plant utilizes 39 Berco crankshaft grinding machines.

All crankshafts are MICROPOLISHED using QPAC brand micropolishing equipment. For more information on the benefits of micropolishing, please visit www.qpac.com.

Crankshafts are Profilometer tested for finish quality and integrity.

Ra standards maintained for all journal surfaces.

All snout and flange threads inspected.

Continuous quality control management through the entire production process.

All kits equipped with brand name rod and main bearings.
