

NAPA COLD POWER COMPRESSORS (NCC)  
WARRANTY POLICY

Warranty Period

NAPA COLD POWER Compressors (GAP) warrants their product to be free from defects in material and workmanship for a period of two (2) years or 24,000 miles from the date of original installation.

Warranty Requirements

To be eligible for warranty consideration, each of the following requirements must be met:

1. Written documentation of the following shall be included with each compressor returned:
  - A. Proof of purchase and replacement of an accumulator or receiver drier, expansion device (orifice tube or expansion valve), and condenser (if applicable).
  - B. The condenser shall be replaced on all applications that use a scroll or FS10 compressor and/or in systems that have experienced a catastrophic compressor failure and debris is found at the discharge port. It is highly recommended that all condensers be replaced on 1989 and newer vehicle applications.
  - C. Proper system flushing to include a closed loop flushing machine with refrigerant or power flushed with an approved NAPA flush.
  - D. Replacement of all refrigerant system components including, but not limited to, refrigerant lines, evaporator, and condenser.
  - E. Use of the correct amount of Original Equipment Manufacturer recommended lubricants (PAG in R134a and Mineral Oil in R12).
2. Compressors returned with flush or contamination within the compressor indicating improper flush procedures or installation will be denied warranty.
3. The use of any sealant will void the warranty.

General Provision

NAPA COLD POWER Compressors (GAP), in its sole opinion, shall determine if the compressor is defective and the installation has met the requirements above.
