

BATTERIES

XDT & SPECIAL APPLICATION

- Battery constructed with dual terminals for a universal top or side terminal fit.
- Handles included for convenient installation and transportation.
- Starting power with reserve capacity performance for accessories, computers, and emergency needs.
- Utilizes advanced engineering and computer-aided manufacturing in providing a flush cover design that allows the battery to fit into the vehicle with no hold-down or vent cap interference.
- Flush cover design eliminates the danger of harmful acid spills and loose vent plugs to keep battery top dry and corrosion-free. Safety vents are flame-retardant for added user protection.
- Calcium-calcium alloy provides minimal water loss and very little gassing ensuring a truly maintenance-free battery with plenty of starting power.
- Full-frame optimized power plates avoid sharp wires poking through separators and directs the power straight to the lug for low resistance and higher cranking amps.
- Positive center-lug, full-frame, power path grids direct more current to the terminals to deliver maximum starting power every time.
- Deep-pocket narrow-rib envelope separators protect the grids helping to prevent shorts for longer life. Narrow ribs reduce separator "corrode thru." Deep-pocket envelopes dramatically improve reliability and extend service life.
- Forged terminals & bushings are very solid preventing porosity, corrosion, black post, and harmful acid leaks.
- Pure demineralized electrolyte with no contaminants ensures true maintenance-free performance for reduced water loss & gassing and long battery life.
- High-impact polypropylene cover is heat sealed to the case under extreme pressure. This helps prevent electrolyte leakage, improves reliability, and reduces breakage. Easy grip carrying handle offers easy installation.
- Over 250 quality control checks ensure long life, maximum performance, and a battery you can trust.
