

EMERGENCY VEHICLE

BATTERIES

- Batteries are specially designed to handle the demanding needs of emergency vehicles with high under-hood temperatures and severe service situations.
- Handles included for convenient installation and transportation.
- Cover fits under OE heat shields.
- Full-frame optimized power plates avoid sharp wires poking through separators and directs the power straight to the lug for low resistance and higher cranking amps.
- Deep-pocket narrow-rib envelope separators protect the grids helping to prevent shorts for longer life. Narrow ribs reduce separator "corrode thru." Deep-pocket envelopes dramatically improve reliability and extend service life.
- Forged terminals & bushings are very solid preventing porosity, corrosion, black post, and harmful acid leaks.
- Pure demineralized electrolyte with no contaminants ensures true maintenance-free performance for reduced water loss & gassing and long battery life.
- High-impact polypropylene cover is heat sealed to the case under extreme pressure. This helps prevent electrolyte leakage, improves reliability, and reduces breakage.
- Convenient carrying handle provides ease of transport and installation.
- Remote safety vents are flame-retardant. Keeps battery top dry and corrosion-free.
- Tested for performance with over 250 quality control checks.
