

SS-50® OIL RINGS

The best design in the industry for controlling oil. The SS-50® design incorporates a stainless steel expander-spacer that is electro-polished to provide a smooth, corrosion-resistant surface that repels dirt. And they're fatigue-resistant for maximum durability.

In addition, precision-fit SS-50 oil rings:

- Are easy to install
- Provide instant seating upon engine start-up
- Provide uniform cylinder wall contact
- Provide consistent pressure under high-heat conditions
- Eliminate oil ring flutter and deformation
- Conform to worn or out-of-round cylinder bores
