

G1 INDUSTRIAL SCBA

Facepiece & Cylinder Compatibility

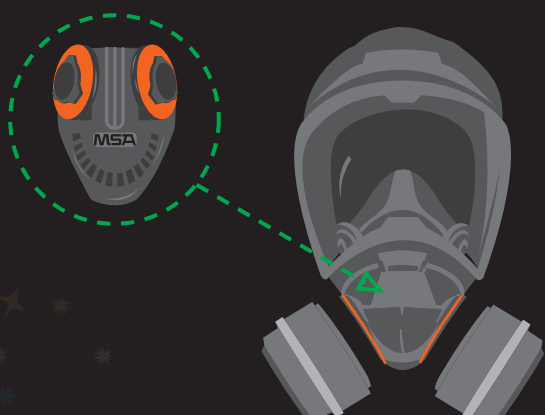

Relying on respiratory protection that is easy to use, comfortable, and ready to go is vital for industrial facilities to meet the needs of a challenging work environment. But one of the most important considerations for respiratory protection is compatibility. An SCBA that allows for the use of the same cylinder across multiple platforms throughout your fleet, that can be integrated with other NFPA products you might have, and a facepiece that allows for APR use with a variety of cartridge options is key to ensuring your respiratory protection program is comprehensive.

Here are the updates to compatibility in the G1 Industrial SCBA:

Facepiece

The G1 Facepiece supports diverse respiratory needs within a facility. It offers Twin Cartridge APR compatibility. This includes Advantage® and Comfo® Cartridges with Adapter.

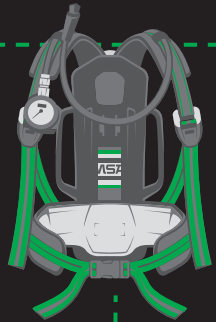

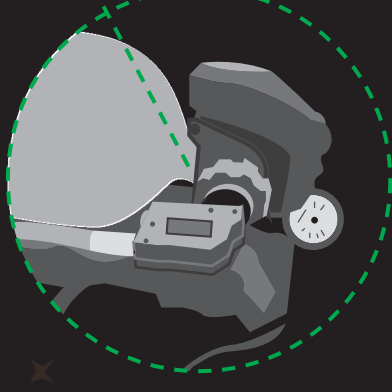

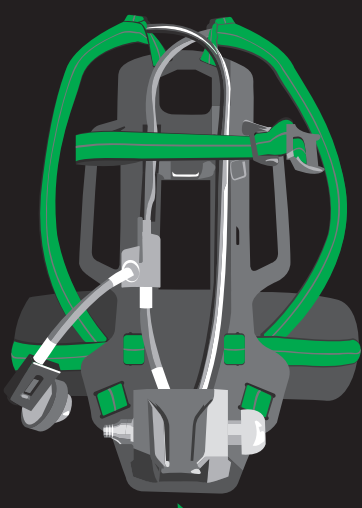

G1 Industrial Remote Cylinder Connection

The G1 iRC capability on the G1 SCBA allows for use of the same cylinder across all multiple platforms of MSA SCBA, including G1 NFPA SCBA and AirHawk® II SCBA.

Previously, the G1 Industrial SCBA was only compatible with G1 Industrial SCBA cylinders. But now with G1 iRC, it's compatible with AirHawk II cylinders, G1 NFPA cylinders and G1 Industrial SCBA cylinders. Available in both threaded and quick connect options.

Now Compatible!

You can now use the G1 SCBA with Industrial Remote Cylinder Connection (G1 iRC) with your other MSA cylinders:

- AIRHAWK II 
- FIREHAWK M7 
- G1 NFPA
