

MSA G1 ExtendAire™ II System

WHEN YOU GO IN, WE GO IN WITH YOU.

MSA G1 ExtendAir® II System

The all new MSA G1 ExtendAir® II System is an Emergency Breathing Supply System (EBSS) accessory that uses intermediate pressure air to provide firefighters with emergency breathing air.

The G1 ExtendAir® II System allows firefighters to quickly and easily interconnect to a fellow firefighter's air supply. The ExtendAir® II System integrated into the G1 SCBA, providing unrestricted mobility and easy access during emergency situations. The system uses locking quick-connects with integrated check valve that prevents contamination of the breathing air pathway by the ambient atmosphere.

The new MSA G1 ExtendAir® II System features an integrated rescue hose and manifold assembly that uses both male and female quick-connect fittings. The system is stowed in a low profile pouch that mounts on the carrier assembly, positioned to prevent snagging and accidental opening.

Approvals & Standards

The G1 ExtendAir® II is NIOSH approved and NFPA 1981-2013 edition compliant.

The MSA G1 ExtendAir® II also provides an airline solution for quick connection at any emergency event requiring an extended air supply like bucket operations, Hazmat or confined spaces. An airline adapter connects to the ExtendAir® II manifold assembly, to provide external air from distances up to 300 feet away.

MSA G1 SCBA ExtendAir® II System Ordering Information

G1 ExtendAir® II can be configured on the purchase of a new G1 SCBA or by installing a field upgradeable conversion kit.
