

ALTAIR® 4X Multigas Detector

Bid Specifications

Physical Characteristics	
Size	Instrument shall not exceed 4.4" L x 3.0" W x 1.37" D in total size.
Weight	Less than 8.3 oz.
Handling	Unit shall be one-hand operation device.
Case material	Rubberized over-mold.
Environmental protection	Instrument shall be approval agency-certified to IP67 protection levels
	for dust and water ingress.
Display	Display is viewable from the front with characters at least 0.3" tall.
Color	Charcoal - shall have option for phosphorescent (glow-in-the-dark) case.

User Interfaces	
Display type	Liquid crystal display (LCD) with large, easy-to-read characters and icons.
Backlight	Unit must provide white backlight for low-light viewing.
	Backlight time-out to conserve power must be user-adjustable.
Keypad/switches	Unit must have no more than three switches or pushbuttons to operate.
	There shall be no requirement to access hidden or internal switches for any
	instrument operations. Buttons must be easy to operate when users wear gloves.
Data access	Access to data log and event log through infrared link to Windows-ready PCs.

Monitoring Capability			
Gases	Instrument shall be capable of measuring up to four gases: combustible gas, oxygen, CO, and either H_2S or NO_2 .		
Sensor configuration	Ability to enable/disal	ble individual sensor c	hannels.
Sensor missing alarm	All sensor channels provide missing sensor alarm if sensor has been removed and sensor channel has not been disabled.		
Combustible gas display	Instrument shall be capable of displaying combustible gas reading as % Lower Explosive Limit (LEL) or 0-5% CH ₄ by volume.		
Pressure compensation	Instrument oxygen se	ensor shall have built-in	n pressure compensation.
Sensor life monitoring	Instrument shall be able to alert user when a particular sensor nears end of life, following instrument calibration.		
Sensor types	Instrument shall be available with the following gas sensing options:		
	Gas type	Range	Resolution
	Combustible	0-100% LEL	1% LEL
		0-5% Vol CH ₄	0.05% Vol CH ₄
	Oxygen	0-30% Vol	0.1% Vol
	Carbon monoxide	0-1999 ppm	1 ppm
	Hydrogen sulfide	0-200 ppm	1 ppm
	Nitrogen dioxide	0-50 ppm	0.1 ppm

Basic Operational Features		
Instrument buttons	Buttons on instrument must be clearly marked and intuitive.	
Inadvertent shutoff	Instrument shall be designed to protect against accidental shutoff.	
Zero adjustments	Instrument shall provide Fresh Air Setup (FAS) function at user's discretion.	
Zero adjustment	FAS function will not allow unit to zero out hazardous readings.	
safety lockout		
Confidence signals	Instrument shall provide periodic audible and visual signals indicating instrument	
	operation. User shall have option of disabling audible and visual signals if desired.	
	Green "Safe LED" will periodically flash when all conditions are safe.	
Time/date	Instrument must be able to display time and date.	
	User must be able to reset time and date without tools.	
Last calibration date	Instrument must be able to display last successful calibration date.	
Instrument power-on	Power-on instrument button must be clearly marked.	

Sensor Characteristics a	and Performance		
Sensor life	Sensors shall have an expected life of four years.		
End of life sensor indicator	Instrument shall notify following calibration.	Instrument shall notify user when sensor is close to and at its end of life, following calibration	
Typical t (90) response times	Combustible sensor	<10 seconds (methane) < 15 seconds (pentane)	
	Oxygen sensor CO sensor H ₂ S sensor NO ₂	< 10 seconds < 15 seconds < 15 seconds < 20 seconds	
All sensors	All sensors shall have built-in control circuitry, including drive circuits, memory, microprocessor, and analog to digital converter to all for sensor level control and compensation.		
Oxygen sensor	Oxygen sensor shall be lead-free and use non-consumable chemical reaction.		
Combustible sensor	Combustible sensor must provide the following poison resistance at minimum: 3000 ppm*hours to H ₂ S 90 ppm*hours to silicon		
CO/H ₂ S sensor	CO/H ₂ S sensor shall be designed with extremely robust carbon filter for CO channel to block interference. Sensor shall be designed for virtually no cross-channel interference. Sensor shall be designed for two-toxic gas detection in the same physical envelope as a single gas sensor.		
CO/NO ₂ sensor	CO/NO ₂ sensor shall be designed with extremely robust carbon filter for CO channel to block interference. Sensor shall be designed for two-toxic gas detection in the same physical envelope as a single gas sensor.		

Advanced Display and Software Options		
Industrial hygiene	Instrument shall have capability of displaying PEAK, STEL and TWA at user's	
displays	discretion. User shall have ability to enable/disable STEL and TWA functions.	
Instrument settings	All settable instrument parameters (alarm set points, expected calibration gas values,	
	etc.) shall be protected by user-selectable password.	
Reset of functions	User shall be provided with capability of resetting PEAK, STEL and TWA	
	readings in the field.	
Measurement units	Unit shall be capable of displaying both types of installed gas sensors	
	and measurement units for each gas.	

Instrument Alarms	
MotionAlert [™] feature	Instrument shall offer MotionAlert feature. When activated, instrument shall go into latch alarm when no instrument movement is detected for 30 seconds.
InstantAlert [™] feature	Instrument shall have InstantAlert feature to allow users to manually activate all alarms if situation requires.
Visual alarms	Visual alarms shall consist of bright, flashing LEDs on top and bottom of
	instrument and positive indication on unit's display for alarm type identification.
Audible alarm	Audible alarm shall be rated at >95 dB @ 1-ft.
Vibrating alarm	Unit shall be offered with standard vibrating alarm.
LEL latching alarm	Combustible channel shall have non-resettable latching alarm when combustible
	gas level exceeds 100% LEL or 5.00% CH ₄ .
Oxygen alarms	Oxygen channel shall have alarm set points for both oxygen deficiency
	and oxygen enrichment.
Alarm set points	Alarm set points must be user-settable.
STEL and TWA alarm	Instrument shall provide audible, visual and vibrating alarms if STEL or TWA levels
	are exceeded. User shall be able to select alarm set points for STEL and TWA.
Battery alarms	Instrument shall provide user with 10-minutes warning of battery power loss in all environmental conditions. Power consumption alarms shall activate audible, visual
	and vibrating alarms.

Instrument Power	
Run time	Instrument run time shall be 34 hours continuous running for ALTAIR 4X MSHA and
	24 hours continuous running for ALTAIR 4X.
Power supply	Instrument shall be equipped with a rechargeable battery.
Battery life indication	Monitor shall provide icon depicting estimated remaining battery operation time.
	Battery icon must always be visible when instrument is powered on.

Charging cradle	Optional charging cradle shall be offered.
Charger input voltages	Chargers shall be available for 110VAC/220VAC and 12-24VDC.
Charging status	Instrument or charging cradle shall provide visual indication of battery charging status.

Calibration	
Calibration tools	Unit shall require no special tools for calibration other than calibration cap, cylinder, regulator, and tubing to supply gas to instrument.
Pushbutton calibration	Calibration shall be easily performed using instrument's pushbuttons. Internal instrument access or tools shall not be necessary for calibration.
Calibration cylinder mix	Calibration gas cylinders shall be offered in standard four-gas configurations (combustible, O ₂ , CO, and NO ₂ or combustible, O ₂ , CO and H ₂ S). Instrument shall be calibrated using one cylinder.
Calibration time	Span calibration shall not exceed 60 seconds.
Automatic calibration	Instrument shall be compatible with optional automated test and with calibration system able to store data. External system shall automatically recognize and calibrate instrument and retain all calibration records.
Bump test station	Economical bump test station shall be offered to verify field performance. Test station shall be capable of checking performance of standard four-gas instrument (combustible, O ₂ , CO and NO ₂ , or combustible, O ₂ , CO, and H ₂ S) and store records.

Sampling Systems	
Sampling modes	In addition to standard diffusion mode, instrument must be available with external powered pump probe option.
Sampling system filters	Pump must contain user-replaceable filters to prevent liquid and dust ingress.
Allowable sample line length	Instrument must be capable of sample draw from up to 50 feet away.
Fluid ingress protection	Sample probe designed to prevent water and debris from entering instrument shall be offered.

Data logging (Instrument	Data Storage)
Data logging	Instrument must be available with standard data logging.
Event log	Instrument shall record at least 500 events.
Data log capacity	Data log shall record and store data for an average of 50 hours (at one-minute intervals) without overwriting existing information in normal use.
Gas record content	Data log entries shall contain as minimum date, time and record of peak and average readings for each gas sensor (oxygen shall be recorded as maximum and minimum intervals).
Atmospheric record	Instrument shall have provisions to record atmospheric temperature changes.
Record intervals	Time span between data records shall be user-selectable from 15 seconds to 15 minutes.
Data retention	Instrument data stored in memory shall not be lost or corrupted in event of sudden instrument power loss.
Activity record	Instrument data log shall record and be capable of reporting significant
content page	instrument events including:
	Gas and battery alarms
	Fresh air setups, sensor re-zeroing and calibrations
	Battery voltage and elapsed run time
	Reset of PEAK, Min, STEL, and TWA values

Environmental and Durability	
Drop test	Can survive incidental 20' drop.
Temperature	Normal operation: -10° to 40° C
	Extended: -20° to 50° C
	Short periods (15 minutes): -40° to +60° C
Humidity	15-90% RH (non condensing) continuous
	5-95% RH (non condensing) Intermittent

Maintenance & Warranties		
Sensor replacement	Sensors shall be easily accessed and replaced by users if desired by purchaser.	
	No printed circuit boards should require removal to access sensors.	
Warranty, consumables	Instrument shall have three-year warranty on all components, including sensor	
	and battery.	
Extended warranty	Optional extended warranty shall be offered for an additional one year	
	(fours year total).	

Certifications	
North America	30 CFR Part 22, Methane Detector
	30 CFR Part 75 Determination testing for methane and oxygen deficiency
USA and Canada	USA / Canada ETL
