

APPLICATION NOTE

Aircraft Hangars

Model FL3100H Flame Detectors

Aircraft Hangar

Model FL3100H flame detectors and FL802 display modules are used to protect aircraft in their hangars from potential fires caused by leaking fuel.

The FL802 voting option is used in this application to minimize the potential of false alarms. The relay contacts are taken to a fire panel for local area annunciation, fire station reporting and activation of the fire suppression system.
