

Snaphooks Connected to HLL Cable

Technical Brief FP-PC014

To whom it may concern,

MSA allows connection of our snaphooks and carabiners directly to MSA wire rope cable horizontal lifelines (HLLs). MSA has determined this to be a safe connection method. However, this statement can only apply from MSA's perspective for MSA product and may be superseded if being connected to another company's HLL. We recommend that the user ask the other company as well if that is the case.

Best Regards,

A handwritten signature in black ink, appearing to read "William Kreke".
