

Customer Safety Solutions from MSA

Occupational Health and Safety

- Head, Eye, Face and Hearing Protection •
- Respiratory Protection •
- Gas Detection •
- Fall Protection •

MSA provides these value-added training resources:

- **Confined space analysis:** MSA conducts plant tours to determine potential confined space hazards.
- **Head and face protection:** MSA can assist with your workplace hazard assessments to offer specific product solutions.
- **Portable gas detection:** MSA offers gas detection product training, including equipment calibration skills.
- **Respiratory protection:** MSA conducts both fit-testing and fit-test training and assists with OSHA compliance program development.

MSA offers **MSA-U**, our on-line training center. Located on MSA's Web site home page, **MSA-U** training and informational materials include:

- Product proper care and use.
- Standards information.
- Instruction manuals.
- Information presented in a variety of formats and languages.

MSA-TV is your online resource for MSA safety equipment videos.

- Short, practical, quick reference videos explaining MSA product features, assembly, use, and maintenance.
- Videos are organized by both product type and market.
- Short clips of MSA products in the news and in your community.

More than ever, customers are concerned about worker safety issues and OSHA compliance. MSA offers total safety solutions to enable company compliance and help to ensure that their employees work safely.

MSA's core competency is safety products; our brand is well-known. MSA designs and manufactures quality-driven products that are supported by the safety industry's largest field representative team.

This booklet provides useful and practical workplace safety information. Together we can provide safety solutions for our customers.

Our Mission: Your Safety!

Occupational Health and Safety

Head Protection Products for OSHA Compliance

Issue: Workers in many industries are required to wear ANSI/ISEA Z89.1-2009-approved head protection to help protect wearers from a variety of hazards.

Application: Wearing ANSI-compliant head protection helps to minimize worker exposure to specific hazards; exposure hazards determine specific head protection applications.

Recommendation: Grainger offers MSA ANSI-compliant head protection. MSA head protection products are available for many types of hazard protection.

ANSI/ISEA (American National Standards Institute) Z89.1-2009 Requirements for Head Protection:

TYPE I (Top Impact)

- Helmets intended to reduce impact force to top of wearers' heads
- Top impact types are the market's most common hardhat

TYPE II (Top and Lateral Impact)

- Helmets intended to reduce impact force resulting from blows received off-center or to top of wearers' heads
- This helmet type has more specific market applications

Electrical Performance

1. Class E (Electrical): Helmets intended to reduce danger of exposure to high-voltage electrical conductors, proof-tested at 20,000 volts
2. Class G (General): Helmets intended to reduce danger of exposure to low-voltage electrical conductors, proof-tested at 2,200 volts
3. Class C (Conductive): Helmets not intended to provide protection from electrical conductors

Three non-mandatory tests have been added to the updated ANSI/ISEA standard

1. **Reverse donning:** Helmet has been tested to be worn in reverse.
2. **Lower temperature:** Helmet has been tested to lower temperature rating.
3. **High-visibility:** Helmet meets high-visibility requirements.

Product Features and Benefits:

Type I Certified Hardhats:

- V-Gard® Caps and Hats (Class E)

Market applications:

- **V-Gard Helmets:** Agriculture, asbestos abatement, chemical, construction, domestic preparedness, electric utility (V-Gard Helmet only), hazardous materials, indoor air quality, medical, mining, nuclear, oil and gas, paper pulp, blasting, sanding and grinding, spray painting, water and wastewater, welding.

Hazard applications:

- **V-Gard Helmets:** Confined space, electrical shock, overhead falling objects, splash, and welding.

Logo Express® Service Custom Imprinting

- Custom logo imprinting is available on V-Gard Caps and Hat models.

V-Gard Hats and Caps

- Popular styling, lightweight, comfortable
- Meet Class E electrical performance requirements
- Meet voluntary standard for reverse donning and low temperature
- High-density polyethylene shell with UV inhibitors, sizes 6.5-8 inches

Occupational Health and Safety

Head Protection Products for OSHA Compliance

Issue: Workers in many industries are required to wear ANSI/ISEA Z89.1-2009-approved head protection to protect wearers from a variety of hazards.

Application: Workers will minimize exposure to specific hazards by wearing ANSI-compliant head protection.

Recommendation: Grainger offers MSA ANSI-compliant head protection. MSA head protection products are available for many types of hazards.

ANSI/ISEA (American National Standards Institute) Z89.1-2009 Requirements for Head Protection:

TYPE I (Top Impact)

- Helmets intended to reduce force of impact to top of wearer's head
- Type I is the most common hardhat on the market

TYPE II (Top and Lateral Impact)

- Helmets intended to reduce force of impact resulting from blow received off-center or to top of wearer's head
- Type II is generally found within more specific market applications

Electrical Performance

1. Class E (Electrical): Helmets intended to reduce danger of exposure to high-voltage electrical conductors, proof-tested at 20,000 volts
2. Class G (General): Helmets intended to reduce danger of exposure to low-voltage electrical conductors, proof-tested at 2,200 volts
3. Class C (Conductive): Helmets not intended to provide protection from electrical conductors

Non-Mandatory Tests

1. Reverse Donning: Helmets with double-arrow circle are approved to be worn in reverse or with Swing-Ratchet Suspension
2. Lower Temperature: Helmets with LT are approved to lower temperature test. Temperature is lowered from 0F to -22F
3. High Visibility: Helmets with HV meet high-visibility requirements

Market Applications

- SmoothDome®, Vanguard™ and Advance® Helmets: Agriculture, asbestos abatement, chemical, construction, domestic preparedness, electric utility (SmoothDome Helmet only), hazardous materials, indoor air quality, medical, mining, nuclear, oil and gas, paper and pulp, sand blasting, sanding and grinding, spray painting, water and wastewater, welding
- Type II is generally found within more specific market applications

Hazard Applications

- SmoothDome, Vanguard II and Advance Helmets: Confined space, electrical shock (SmoothDome Helmet only), overhead falling objects, splash, and welding
- Skullgard® and Thermalgard® Helmets: Elevated temperatures, overhead falling objects, splash, and welding

Type I (Top Impact Protection)

SmoothDome Caps

- Lightweight and comfortable; useful for welding applications
- High-density polyethylene shell with UV inhibitors. Size 6.5-8 inches
- ANSI/ISEA Z89.1-2009 (Class E) and CSA Z94.1-2005 (Class E), also Low Temperature- and Reverse Donning-approved

Description	Color	MSA Part #	Grainger Item #

Occupational Health and Safety

Head Protection Accessories for OSHA Compliance

Issue: Workers in many industries are required to wear ANSI-compliant head, face, and hearing protection to help protect wearers from many hazards.

Application: Workers help to minimize exposure to specific hazards by wearing ANSI-compliant head, face, and hearing protection products.

Recommendation: Grainger offers MSA ANSI-compliant head, face, and hearing protection products. MSA products are designed and tested as systems; their compatibility is guaranteed.

Application: When hearing protection and face protection are required with hardhat.

Sound Blocker™ 26 Earmuff

- Designed for use with MSA slotted cap hardhats
- Uniquely designed to be used with Defender® Faceshield Frame
- Tested and approved to NRR 26 dB

Description	Mounts To	MSA Part #	Grainger Item #
Sound Blocker 26 Earmuff	MSA Slotted Cap	10026398	1AVR6

Application: When hearing protection with full-brim hardhat is required.

Soprano Earmuff

- Designed to fit all full-brim hardhats
- Note: Addition of this earmuff reduces helmet's electrical rating to Class C
- Tested and approved to NRR 25 dB

Description	Mounts To	MSA Part #	Grainger Item #
Soprano Earmuff	MSA Non-Slotted Hat	10034487	5LE91

Application: When hearing protection with slotted cap hardhat is required.

Sound Control® HPE Earmuff

- Designed for easy attachment to slotted MSA cap-style hardhats
- Easily adjustable and comfortable to wear
- Tested and approved to NRR 27 dB

Description	Mounts To	MSA Part #	Grainger Item #
HPE	MSA Slotted Cap	10061272	5LE90

MSA Hardhat Accessories

Application: Added protection from sun when wearing a hardhat.

SunShade Hardhat Accessory

MSA's SunShade Accessory not only helps to protect wearer's ears and neck from sun and heat, it also enhances worker visibility with contrasting color band and reflective striping.

- Breathable, high-visibility mesh fabric
- Hat clips help to keep SunShade Accessory from falling or rotating

Color	Mounts to	MSA Part #	Grainger Item #
Yellow-green	Hats and caps	10098032	5KAX6
Orange	Hats and caps	10098031	5KAX7

Sun Shield Hardhat Accessory

MSA's Sun Shield Accessory extends hardhat brim all the way around to help protect wearer's ears and neck from sun's rays.

- Made of sturdy polyurethane
- Front portion has smoke tint

Description	Mounts to	MSA Part #	Grainger Item #
Sun Shield Accessory	V-Gard® Standard Cap	697290	1MDV7
	V-Gard® Standard Hat	697410	5KAX8

Application: Provides additional comfort and absorbs sweat when wearing a hardhat.

Custom Terri-Band Sweatband

- Custom design to fit all MSA hardhats.
- Washable with plastic snaps.

Description	Mounts to	MSA Part #	Grainger Item #
Sweatband, single	All MSA hardhats	10068911	4RB54

Application: When a more secure fit is required when wearing a hardhat, chinstrap assists with keeping hardhat on wearer's head.

Chinstrap

- Designed to fit all MSA hardhats
- Elastic material attaches to hardhat suspension

Description	Mounts to	MSA Part #	Grainger Item #
Chinstrap	All MSA Hardhats	81391	4RB41

Application: Provides secure fit when protective goggle and hardhat are required to be worn together.

Goggle Retainer

- Sturdy neoprene-rubber accessory can be used with any protective MSA hardhat
- Retains goggle on hardhat when not in use and holds goggle securely when worn for eye protection
- MSA goggle retainers are for use with MSA goggles for ANSI compliance

Color	Mounts to	MSA Part #	Grainger Item #
Goggle Retainer	MSA cap-style helmet	459458	4LP06
Goggle Retainer	MSA hat-style helmet	449895	4MC42

Occupational Health and Safety

Hearing Protection Products for OSHA Compliance

Issue: Workers in many industries are required to wear ANSI-compliant hearing protection due to a variety of work-related noise hazards.

Application: When ANSI-compliant hearing protection products are used correctly, workers will minimize their exposure to particular noise hazards.

Recommendation: Grainger offers MSA ANSI-compliant hearing protection products that are designed and tested as systems, therefore, compatibility is guaranteed when used, for example, with MSA hardhats.

Use of hearing protection products such as MSA's left/RIGHT® Ear Muffs can be an integral part of your Hearing Conservation Program.

According to OSHA's Occupational Noise Standard 29 CFR 1910.95 requirements:

- Employers shall protect employees from levels of noise of over 90 decibels during an eight-hour average.
- OSHA prefers engineering or administrative controls, but accepts hearing protection (such as left/RIGHT Hearing Protection products).
- Implementation of a Hearing Conservation Program is necessary if noise levels are above 85 dbA TWA on average.

A Hearing Conservation Program has two main components:

- Hearing protection that is available to other employees; the facility may enforce use.
- Required training for all affected employees.

Noise hazards include:

- Constant exposure to loud noise that can damage hearing.
- Noise-related hearing loss that is not curable.
- Noise-related hearing loss that can affect an individual's ability to understand human speech.

Market Applications:

- **Low (NRR 21)**
 - Landscaping, light industry, pharmaceutical, warehousing, utilities, nuclear, hazardous materials, automotive assembly
- **Medium (NRR 25)**
 - Oil, gas, petrochemical, construction, agricultural, forestry, food and beverage, general industry, pulp and paper
- **High (NRR 28)**
 - Aviation, airports, heavy industry, mining, engine rooms, metal fabrication, sanding and grinding, firearms

MSA left/RIGHT Hearing Protection products are third-party tested in accordance with CSA Class A, EN352-3 and ANSI S3.19-1974.

Left/RIGHT Passive Hearing Protection Ear Muffs

Unique features of MSA left/RIGHT Ear Muffs:

- Patent-pending designs create a uniquely comfortable ear muff.
 - Left cup is different from the right cup for a more customized fit, as we are all different shapes and sizes.
 - Cups are large enough to fit all ear sizes, allowing users to employ properly-fitting hearing protection.
 - Headband contours to the head's actual curves, reducing pressure points for custom fit.
- Each muff can be individually adjusted to users' ear angle and position to enable comfortable and well-fitting ear muffs.

Key point: MSA head protection products are tested as systems with MSA hearing protection products; when these products are used together, the **NRR rating is the actual rating.**

- Often when different manufacturers' products are used together (Brand A ear muff on a Brand B helmet), the ear muff's NRR rating does **not** reflect the actual rating for which the ear muff is approved.
- NRR ratings for MSA ear muffs, when used on MSA helmets, are the actual ratings for which the products are approved.

Application: When hearing protection is required.

Left/RIGHT Passive Hearing Headband Ear Muff

- Headband is designed for balanced, comfortable fit.
- Muff is easily adjustable and comfortable to wear.

Description	Color and NRR	MSA Part #	Grainger Item #
Low	White, NRR 21	10087436	6CCY5
Medium	Blue, NRR 25	10087426	6CCY6
High	Yellow, NRR 28	10087399	6CCY7

Application: When hearing protection with a slotted cap is required.

Left/RIGHT Passive Hearing Helmet-Mounted Ear Muff

- Designed for easy attachment to slotted MSA cap-style helmets.
- Easily adjustable to offer customized fit.

Description	Color and NRR	MSA Part #	Grainger Item #
Low	White, NRR 21	10087439	6CCY2
Medium	Blue, NRR 25	10087429	6CCY3
High	Yellow, NRR 28	10087422	6CCY4

Hygiene Kits for both helmet-mounted and headband model left/RIGHT Ear Muffs

- Hygiene kits help to ensure that muffs stay clean and comfortable.
- It is recommended that the ear-seal rings are replaced every six months.

Description	MSA Part #	Grainger Item #
Low Hygiene Kit	10092878	6CCY8
Medium Hygiene Kit	10092879	6CCY9
High Hygiene Kit	10092880	6CCZ0

Occupational Health and Safety

V-Gard Accessory System for OSHA Compliance

Issue: Workers in a variety of industries are required to wear ANSI/ISEA Z87.1-approved face protection to protect them from a variety of hazards.

Application: Wearing face protection that is compliant to the ANSI standard minimizes exposure to a particular hazard. Industries have varying levels of hazards, and the exposure risk determines the specific face protection application.

Recommendation: Grainger offers ANSI-compliant face protection products from MSA. MSA face protection products are available for virtually any type of hazard protection and are tested and approved for use with MSA head protection and hearing products.

ANSI (American National Standards Institute)/ISEA Z87.1 Requirements for Face Protection:

Z87.1 covers the description, general requirements, testing, marking, selection, care and use of protectors designed to minimize or prevent eye and face injuries from impacts, and non-ionizing radiation. Protectors covered by this standard are designed for use during machinery operations, welding, cutting, assembly, etc.

The Standard mentions that protective components intended for use as part of an assembly must be tested as an assembly. Also, component packaging must list all other components with which it has been tested. MSA's V-Gard Accessory system complies with these statements.

MSA V-Gard Accessory Frames and Visors

All visors except wire screen meet ANSI/ISEA Z87.1-2010 Standard when used on any MSA V-Gard Accessory System frame.

- In addition, only V-Gard Accessory products are tested and approved as a fully-integrated system to work with MSA protective helmets.
- The entire system is designed for easy frame and visor installation/removal, and compatibility with earmuffs, half-mask respirators and other PPE.
- With global approvals and one part number, customers worldwide can utilize this system, reducing inventory costs and increasing efficiency.

V-Gard Universal Frames for Slotted or Non-Slotted MSA Caps

- Designed to fit any MSA protective cap or hat.
- Non-metal construction enables use in electrical applications.
- Elevated temperature designed to withstand temperatures of 350 °F (176.7 °C)

Description	Mounts to	MSA Part #	Grainger Item #
Frame, with Debris Control	Hard Caps	10115822	12V759
Frame, no Debris Control	Hard Caps	10121268	12V760
Frame, Elevated Temperatures	Hard Caps	10116552	TBD

V-Gard Frames for Slotted MSA Caps

- Stowable slot adaptors allow frames to work with or without earmuffs.
- Replaceable debris-control creates a tight seal between the helmet and the frame.
- Elevated temperatures (ET) frame designed to withstand temperatures of 350 °F (176.7 °C)

Description	Mounts to	MSA Part #	Grainger Item #
Frame, with Debris Control	MSA Slotted Caps	10115730	12V755
Frame, no Debris Control	MSA Slotted Caps	10121266	12V756
Frame, ET, with Debris Control	MSA Slotted Caps	10115821	12V757
Frame, ET, no Debris Control	MSA Slotted Caps	10121267	12V758

V-Gard Accessory Chin Protectors and Debris Control

- V-Gard Chin Protectors work as a system with select V-Gard Nitrometer Visors to help provide extra protection from impact and splash hazards to face and neck.
- Unique retractable plates allow greater flexibility of head movement both up and down, and well as side-to-side (12V770).
- Compact, lightweight design provides additional protection between chin and neck area (12V769).

Description	Mounts to	MSA Part #	Grainger Item #
Retractable Chin Protector	Nitrometer Visors	10115828	12V770
Standard Chin Protector	Nitrometer Visors	10115827	12V769
Replacement Debris Control	V-Gard Cap Frames	10116539	12V761

Visors

- Polycarbonate: Suitable for most applications where impact hazards exist. Provides UV protection unless otherwise noted.
- Propionate: Provides chemical splash resistance. Good for applications where chemical splash hazards exist.
- Wire Mesh: Provides maximum ventilation in humid working conditions. Not for use in splash applications.
- Nitrometer: Visor version is used with chin protection.

Description	Color	Dimensions (inches): W-H- Thickness	MSA Part #	Grainger Item #

Occupational Health and Safety

Head Protection Products for OSHA Compliance

Issue: Employers in many industries request hardhat customization using a unique custom logo. In response, MSA offers a custom logo program providing this head protection added feature.

Application: MSA head protection products can be ordered with customized unique logo or other artwork. Customers typically prefer hardhats imprinted with their company logo or with specific themes such as VISITOR or SAFETY FIRST. Adding logos to hardhats does not affect ANSI compliance.

Recommendation: Grainger offers the added feature of custom logos for MSA head protection.

Logo Requirements for Head Protection:

Image Requirements

- 300 dpi minimum
- Font style and size if possible
- PMS color numbers for logo colors

Image File

- Save files in their native format, such as Vector Files, Corel Draw, Illustrator, Freehand, or Photoshop. Vector Files are preferred. For handling text, you must use the "create outline" option, or "convert to curve" option.
- Save all rasterized files, such as JPEG, TIFF, etc., at 300 dpi minimum. The greater the resolution, the better the reproduction quality.

Order Requirements

Minimum order quantity is 20 hardhats (exceptions for the Skullgard Helmet and Bump Cap models however).

- Style mix: Orders using the same custom logo may mix cap and hat style hardhats.
- Model mix: Orders for two different hardhat models are allowed; however, models on the same order are limited to V-Gard and Advance Helmets.
- Color mix: An order for different colors of the same model is allowed; color mix must be in quantities of 20 hardhats.
- Size mix: An order for different hardhat sizes is allowed. Orders below 100 hardhats of one size only are considered to be two separate logo orders. If 100 hardhats of one size are ordered, order price will reduce for meeting 100 level threshold.
- In all cases logo imprinting must use the same logo or set of logos. Changes will separate logo orders and pricing.

Logo:

- Extremely scratch-resistance and durable
- Water-proof and UV-resistant

MSA can now ship your new custom-imprinted logo helmets (in minimum quantities of as few as 20) in five working days after artwork proof is approved.

MSA's Logo Express® Service offers choice of two types of logo imprinting services:

1. Our standard printing process prints up to four logo colors on hardhats.
2. Or, choose our Image2000sm Service premium process. This process reproduces photographic images onto the surface of standard-size white V-Gard Helmets.

Market applications:

- Applications for logo hardhats: Agriculture, asbestos abatement, chemical, construction, domestic preparedness, electric utility (V-Gard Helmet only), hazardous materials, indoor air quality, medical, mining, nuclear, oil and gas, paper and pulp, sand blasting, sanding and grinding, spray painting, water and wastewater, welding.

Compliance

Custom logos do not affect hardhat compliance. For example, if the hardhat is ANSI-approved, it still maintains that approval.

Custom Logo Process Made Simple

Step 1: Choose your hardhat

- Refer to Grainger catalog for a list of MSA hardhats. For MSA hardhats not mentioned in the catalog, please see MSA's catalog or helmet bulletins.

All MSA hardhats can have a custom logo

- MSA's Bump Cap may have only a one-color logo on front.

If the logo has been ordered previously through another channel partner, a customer letter is required informing MSA that Grainger is authorized to order this logo.

Step 2: Custom logo position

Step 3: Your custom logo

- Color(s): To receive colors that most accurately match your logo, we recommend that you use the universally-known Pantone Matching System (PMS), where each color is represented by a number.
- Logo size: If not stated, logo will be sized to appear as large as possible.
- Font style: If needed, please note font style of text.
- Number of colors: Color limit is four separate colors when using our standard logo process.

Step 4: Approval process

- After MSA's Logo Express Service receives all information and artwork required to customize your hardhats, and before producing the hardhats, you will be provided with a finished design proof.

Questions

Please contact us at 800.MSA.LOGO (800.672.5646) with any questions regarding MSA's Logo Express Service.

Occupational Health and Safety

Respiratory Protection Products for OSHA Compliance

Issue: Workers in many industries are required to use NIOSH- (National Institute of Safety and Health) approved respiratory products for proper respiratory protection against a variety of airborne hazards.

Application: Use of proper NIOSH-approved, OSHA-compliant respiratory personal protective equipment helps to minimize exposure to specific hazards. Some hazards have different protection requirements; exposure severity determines the proper level of required respiratory protection.

Recommendation: Grainger offers MSA NIOSH-approved, OSHA-compliant respiratory personal protective equipment for many industries and applications. MSA air-purifying and supplied-air respiratory products can assist with attaining industry compliance.

OSHA Respiratory Protection Standard (29 CFR 1910.134) Key Elements:

The fundamental goal of any respiratory protection program is to control occupational diseases caused by breathing air contaminated with potentially harmful airborne hazards. Listed here are seven key elements that every respiratory protection program should contain:

1. A written plan detailing program administration.
2. A complete assessment and knowledge of respiratory hazards that are likely to be encountered in the workplace.
3. Procedures and equipment to control respiratory hazards, including use of engineering controls and work practices designed to limit or reduce employee exposures to such hazards.
4. Guidelines for proper selection of appropriate respiratory protective equipment.
5. An employee training program covering hazard recognition, dangers associated with respiratory hazards, and proper care and use of respiratory protective equipment.
6. Inspection, maintenance, and repair of respiratory protective equipment.
7. Medical surveillance of employees.

Respiratory Fit Testing

- OSHA requires fit testing for any face mask (full- or half-mask) designed to provide a tight seal along the face, whether it is used in positive- or negative-pressure mode, and whether or not it is disposable.
- Qualitative fit test methods are subjective in nature and rely upon judgment of test subjects. These methods are essentially pass/fail fit tests to assess respirator fit adequacy.
- Quantitative testing methods rely upon objective data to determine proper fit. An assessment of respirator fit adequacy is determined by numerically measuring respirator leakage amount.
- If required fit factor is greater than 100, i.e. when higher levels of respiratory protection are needed, quantitative fit-testing must be conducted.

Advantage® 200LS Half-Mask Respirator

- Unmatched respirator fit and comfort.
- MultiFlex® System is designed to equalize pressure on the face seal area pressure.
- Respirator and cartridges are NIOSH-approved to 42 CFR, Part 84.

6. Inspection, maintenance, and repair of respiratory protective equipment.
7. Medical surveillance of employees.

Respiratory Fit Testing

- OSHA requires fit testing for any face mask (full- or half-mask) designed to provide a tight seal along the face, whether it is used in positive- or negative-pressure mode, and whether or not it is disposable.
- Qualitative fit test methods are subjective in nature and rely upon judgment of test subjects. These methods are essentially pass/fail fit tests to assess respirator fit adequacy.
- Quantitative testing methods rely upon objective data to determine proper fit. An assessment of respirator fit adequacy is determined by numerically measuring respirator leakage amount.
- If required fit factor is greater than 100, i.e. when higher levels of respiratory protection are needed, quantitative fit-testing must be conducted.

Air-Purifying Solutions

Application: Many industrial applications such as confined space entry, emergency situations at waste water treatment facilities, and hazardous material response work.

Advantage® 400 Half-Mask Respirator

The Advantage 400 Respirator is designed to pass the proposed NIOSH fit test panel, meaning a higher degree of protection for large numbers of workers.

- With only three major components, Advantage 400 Respirator reduces cost of ownership
- AnthroCurve™ II Sealing Surface adapts perfectly to multi-ethnic head sizes and facial contours
- Respirator and cartridges are NIOSH-approved to 42 CFR, Part 84

Occupational Health and Safety

Respiratory Protection Products for OSHA Compliance

Issue: Workers in many industries are required to use NIOSH- (National Institute of Safety and Health) approved respiratory products for proper respiratory protection against a variety of airborne hazards.

Application: Use of proper respiratory personal protective NIOSH-approved, OSHA-compliant equipment helps to minimize particular hazard exposures. Some hazards have different protection requirements; the exposure's severity determines required respiratory protection.

Recommendation: Grainger offers MSA NIOSH-approved, OSHA-compliant personal protective respiratory equipment for use in many industries and applications. MSA air-purifying and supplied-air respiratory products can assist you in reaching proper industry compliance.

OSHA Respiratory Protection Standard (29 CFR 1910.134) Key Elements:

The fundamental goal of any respiratory protection program is to control occupational diseases caused by breathing air contaminated with harmful airborne hazards. The following lists seven key elements that every respiratory protection program should contain:

1. **Written plan** detailing the program administration.
2. **Complete assessment** and knowledge of respiratory hazards that are likely to be encountered in the workplace.
3. **Procedures and equipment** to control respiratory hazards, including use of engineering controls and work practices designed to limit or reduce employee exposures to such hazards.
4. Guidelines for **proper selection** of appropriate respiratory protective equipment.
5. **Employee training program** covering hazard recognition, dangers associated with respiratory hazards, and proper care and use of respiratory protective equipment.
6. **Inspection, maintenance, and repair** of respiratory protective equipment.
7. **Medical surveillance** of employees.

Respiratory Fit Testing

- OSHA requires fit testing for any face mask (full- or half-mask) to achieve tight seal along user's face, whether it is used in positive- or negative-pressure mode, and whether or not it is disposable.
- Qualitative fit test methods are subjective in nature and rely on the test subject's judgment. Qualitative fit tests are essentially pass/fail in assessing respirator fit adequacy.
- Quantitative testing methods rely on objective data to determine proper fit. An assessment of respirator fit adequacy is determined by numerically measuring respirator leakage amount.
- If required fit factor is greater than 100, i.e. when higher levels of respiratory protection are needed, quantitative fit-testing must be conducted.

Application: Any situation where a higher level of respiratory protection is required. This PAPR offers many headgear and cartridge options and is useful for many market applications.

OptimAir® TL Powered Air Purifying Respirator (PAPR)

The OptimAir TL PAPR incorporates sleek, low-profile design for user comfort never before offered in a PAPR. Entire system affords lightweight comfort and fit as well as incorporating many "smart" features.

- "Smart" features include crush-proof breathing tube, automatic flow rate setting, audible and visual alarms, and better weight distribution
- Motor blower unit offers slim, curved housing design, helping to minimize fatigue and permits work in tight confined areas
- NIOSH-approved

Description	System	MSA Part #	Grainger Item #

AG, AM, FM, P100	Olive/magenta	10080456	2YRD4

Application: Used for abatement (asbestos), nuclear, lead, and other hazardous particulate environments.

OptimAir MM2K Powered Air Purifying Respirator (PAPR)

Mask-mounted motor blower with HEPA filter has low-profile design that enhances user maneuverability and simplifies decontamination.

- Uses small, lightweight, water-resistant battery pack that operates for eight hours
- System uses comfortable and lightweight Advantage 3000 Facepiece
- NIOSH-approved

FM, AG, CD, HS, P100	Olive/magenta	10067470	1MBJ2

Occupational Health and Safety

Supplied Air Products for OSHA Compliance

Issue: Workers in many industries encounter hazards which require use of supplied-air respiratory systems, either in preparation for potential emergency escape, or for emergency response within IDLH (immediately dangerous to life or health) situations. A potentially hazardous environment common to various industries is confined space, a scenario that may require use of portable gas detection instruments and other PPE (personal protective equipment). Supplied-air respiratory products may also be required during confined space work. ANSI Z117.1-2003 establishes procedures, performance requirements, and minimum safety requirements for confined space operations.

Application: A confined space is defined by ANSI Z117.1-2003 as “an enclosed area that is large enough and so configured that an employee can bodily enter and has the following characteristics: its primary function is something other than human occupancy AND has restricted entry and exit.” Confined spaces represent major health and safety risks for many employees. The ability to recognize and plan appropriately for confined space work can mean the difference between a job well done and disaster.

Recommendation: Grainger offers personal protective equipment such as MSA supplied-air respiratory products to meet confined space safety requirements as defined by ANSI Z117.1-2003.

Confined Space Markets and Applications:

Confined spaces exist in many sizes and shapes and may be found in the following markets: heavy industry, food, chemical and petroleum processing, utility and communications installations, and construction sites to name a few.

The following areas are typically classified as confined spaces and should be treated with caution: storage tanks, pump wet wells, degreasers, sewers, manholes, tunnels, underground vaults, boilers, silos, vessels, grain elevators, mixers, open-topped water tanks, water towers, enclosures with bottom access, and railcar tanks.

Respiratory Protection Solutions for Confined Space:

Once the atmosphere of a confined space has been analyzed, proper respiratory protection equipment should be selected for all entrants working within the confined space. Supplied-air respirators such as SCBA (self-contained breathing apparatus) and supplied-airline respirators are common product applications due to potential risk of oxygen deficiency and contaminant concentrations. Air-purifying respirators should not be used for confined space entry unless known conditions exist and can be maintained.

Supplied-Air Solutions

Application: Emergency escape from toxic environments, including IDLH atmospheres.

TransAire® Escape Respirators

- Quality supplied-air escape respirators offer rapid, uncomplicated escape from IDLH atmospheres
- Lightweight and unobtrusive cylinders for easy egress from tightly-spaced areas
- Air flows directly to lens, minimizing fogging; fits easily over eye glasses and full beards
- Withstands exposure from temperatures from 0F to 160F

Description	MSA Part #	Grainger Item #
TransAire Respirator 5, 5-minute	10008292	1DKR8
TransAire Respirator 10, 10-minute	10008293	1DKR9

Application: Many industrial applications such as confined space entry, emergency situations at waste water treatment facilities, and hazardous material response work.

AirHawk® II Air Mask

- Durable air frame carrier and harness assembly comes standard with large sidehandles and central attachment point to pull workers to safety in rescue scenarios
- PR-14™ First-Stage Regulator is designed with the fewest number of parts in the industry and can be maintained without special tools
- Firehawk® PTC (Push-to-Connect) Regulator has only 22 replaceable parts, making cost of ownership very low
- Uses versatile and comfortable full-mask Advantage® 4000 Facepiece
- NIOSH-approved

Description	MSA Part #	Grainger Item #
AirHawk II Air Mask, Advantage 4000 Facepiece, 30-minute aluminum cylinder	10095804	4AFU6
AirHawk II Air Mask, Advantage 4000 Facepiece, 30-minute carbon cylinder	10095806	4AFU7

Application: Any IDLH application which combines with high heat and flame applications such as petroleum refinery emergencies or steel mill high heat situations.

FireHawk® M7 Air Mask

The FireHawk M7 Air Mask is MSA's most advanced SCBA, and is designed as a modular platform exceeding new NFPA 2007 requirements, providing responders with the highest-quality SCBA currently available.

- Entire SCBA simplifies maintenance through parts reduction, all of which lower total ownership cost
- System is designed to accept future technology upgrades, as unit includes electronic components such as PASS alarms
- Electronics are virtually "bullet-proof" to provide superior impact and water ingress protection
- Uses Ultra Elite® Facepiece, providing exceptional visual and communication capabilities
- NIOSH- and NFPA 2007-edition approved

Occupational Health and Safety

Gas Detection Equipment for Air Monitoring Compliance

Issue: Workers in a variety of industries may encounter potentially hazardous gases every day in confined space atmospheres. ANSI Z117.1-2003 establishes the procedures, performance requirements, and minimum safety requirements for confined space operations.

Application: A confined space is defined by ANSI Z117.1-2003 as an enclosed area that is large enough and so configured that an employee can bodily enter and has the following characteristics: its primary function is something other than human occupancy AND has restricted entry and exit. Confined spaces represent potentially major health and safety risks for many employees. The ability to recognize and plan appropriately for confined space work can mean the difference between a job well done and disaster.

Recommendation: Grainger offers the MSA ALTAIR® 4X Multigas Detector to monitor for hazardous gases and oxygen deficiency. This monitoring equipment satisfies the safety requirements for confined space as defined by ANSI Z117.1-2003.

ANSI (American National Standards Institute) Z117.1-2003 Safety Requirements for Confined Spaces:

Requirement 6.1.6

- 1 **Instrument reliability verification:** Calibration of direct reading portable atmospheric testing instruments shall be conducted according to manufacturer recommendations as necessary to ensure accuracy; functional (bump) test should be performed prior to each day's use.
- 2 **Continuous monitoring:** Continuous monitoring should be considered when workers are present in confined space atmospheric conditions that have the potential to change, such as broken/leaking pipes or vessels.

Confined space markets and applications:

Confined spaces exist in many sizes and shapes and can be found within these markets and others: heavy industry, food, chemical and petroleum processing, utility and communications installations, and construction sites.

The following areas are typically classified as confined spaces and should be treated with caution: storage tanks, pump wet wells, degreasers, sewers, manholes, tunnels, underground vaults, boilers, silos, vessels, grain elevators, mixers, open-topped water tanks, water towers, enclosures with bottom access, and railcar tanks.

Understanding gas detection bump tests and calibration:

To ensure accuracy of all monitoring and detection equipment, calibration should be performed regularly. To further clarify, the International Safety Equipment Association (ISEA) has issued a position statement on instrument calibration for use in confined spaces. According to this document, "a bump test or full calibration of direct-reading portable gas monitors should be made before each day's use in accordance with the manufacturer's instructions, using an appropriate test gas." If an instrument fails the bump test, it must be adjusted via full calibration before use.

- Proper, regular instrument calibration helps to prevent inaccurate gas concentration readings that could result in injury or even death of workers and other personnel.

ALTAIR 4X Multigas Detector

Continuously monitors for oxygen deficiency or enrichment, presence of combustible gas, and presence of certain toxic gases (such as carbon monoxide and/or hydrogen sulfide), meeting ANSI requirements.

- MotionAlert™ feature signals “man down” plus audible (95+ dB), visual (bright LEDs), and vibrating alarms
- Unit is IP67-rated for unsurpassed dust and water resistance; withstands 20-ft drop test
- Exclusive MSA XCell® Sensors offer superior performance, reliability, and cost savings
- Large, easy-to-read display for confined space work
- Long-life battery lasts for 24+ hours
- Comprehensive three-year warranty, optional one-year extended warranty

All (UL-approved) kits below include data logging, charger, calibration cap and tubing, CD manual.

According to this document, "a bump test or full calibration of direct-reading portable gas monitors should be made before each day's use in accordance with the manufacturer's instructions, using an appropriate test gas." If an instrument fails the bump test, it must be adjusted via full calibration before use.

- Proper, regular instrument calibration helps to prevent inaccurate gas concentration readings that could result in injury or even death of workers and other personnel.

Product Features

ALTAIR® 5X Multigas Detector

- Continuously monitors for oxygen deficiency or enrichment, the presence of combustible gas, and the presence of certain toxic gases (such as carbon monoxide and/or hydrogen sulfide), meeting ANSI requirements
- MotionAlert™ feature signals “man down”, plus audible (95+ dB), visual (bright LEDs) and vibrating alarms
- InstantAlert™ feature offers manual activation of all alarms to alert others to potentially hazardous situations
- Unit is IP65-rated for unsurpassed dust and water resistance and can withstand a 10-foot drop test
- Internal pump for remote sampling such as for confined space entry
- Large, easy-to-read color display is useful when working in confined spaces
- Optional logo display screen customization
- Long-life battery lasts for 18+ hours
- Available 17-language display capability
- Comprehensive 3-year warranty

Galaxy® Automated Test System

- Ease of use; able to calibrate and test gas detectors effortlessly.
- Low cost of ownership; saves time, calibration gas and money.
- Proactive safety; command, control and configure to suite your needs.

ALTAIR 5X Multigas Detector Calibration Equipment

Description	MSA Part #	Grainger Item #
Calibration kit, Model RP	477149	1RG86
4-gas calibration gas (LEL, O ₂ , CO, H ₂ S), 34L	10048280	2TEY1
SO ₂ calibration gas, 34L	711070	3FLV1

All (UL-approved) kits listed below include data logging feature, integral pump, rechargeable battery pack, charger, calibration cap, tubing, CD manual.

Description	MSA Part #	Grainger Item #
Economy Kits - monochrome display		
4-gas: LEL, O ₂ , CO, H ₂ S	10116924	6RPZ6
5-gas: LEL, O ₂ , CO, H ₂ S, SO ₂	10116925	6RPZ7
Industrial Kits - monochrome display, 10-ft sampling line, 1-ft probe		
4-gas: LEL, O ₂ , CO, H ₂ S	10116926	6RPZ8
5-gas: LEL, O ₂ , CO, H ₂ S, SO ₂	10116927	6RPZ9
Deluxe Kits - color display, 10-ft sampling line, 1-ft probe		
4-gas: LEL, O ₂ , CO, H ₂ S	10116928	6RRA0
5-gas: LEL, O ₂ , CO, H ₂ S, SO ₂	10116929	6RRA1

ALTAIR 5X Multigas Detector Accessories

Description	MSA Part #	Grainger Item #
Power supply	10087913	2TEX6
JetEye IR Adaptor (required for data download)	10082834	2TEY4
Alkaline battery pack	10114837	6RRA9
Lithium-ion battery pack	10114835	6RRA8
Vehicle charger	10099397	6RRA7

ALTAIR 5X Multigas Detector Replacement Sensors

Description	MSA Part #	Grainger Item #
Combustible (LEL) sensor	10106722	5ERK9
Oxygen (O ₂) sensor	10106729	5ERL3
Carbon monoxide (CO)/hydrogen sulfide (H ₂ S) sensor	10106725	5ERL2

Occupational Health and Safety

Gas Detection Solutions for OSHA Compliance

Issue: Many industrial workers encounter potentially hazardous gases every day within confined space environments. ANSI Z117.1-2003 establishes procedures, performance requirements, and minimum safety requirements for confined space operations.

Application: A confined space is defined by ANSI Z117.1-2003 as “an enclosed area that is large enough and so configured that an employee can bodily enter and has the following characteristics: its primary function is something other than human occupancy AND has restricted entry and exit.” Confined spaces represent major potential health and safety risks for many employees. Appropriate recognition and planning for confined space work can mean the difference between a job well done and disaster.

Recommendation: Grainger offers the MSA gas detectors for monitoring of hazardous gases and oxygen deficiency. These models satisfy confined space safety requirements as defined by ANSI Z117.1-2003.

ANSI (American National Standards Institute) Z117.1-2003 Safety Requirements for Confined Spaces

Requirement 6.1.6:

Instrument reliability verification: calibration of direct-reading portable atmospheric testing instruments shall be conducted according to manufacturer recommendations, as necessary to help ensure accuracy, and functional (bump test) prior to each day's use.

Continuous monitoring should be considered in situations when a worker is present in a space where atmospheric conditions have the potential to change, for example broken or leaking pipes or vessels.

Confined Space Markets and Applications

Confined spaces of many sizes and shapes are typically found in heavy industry, food, chemical and petroleum processing, utility and communications installations, and construction sites.

The following areas are also typically classified as confined spaces and should be treated with caution: storage tanks, pump wet wells, degreasers, sewers, manholes, tunnels, underground vaults, boilers, silos, vessels, grain elevators, mixers, open-topped water tanks, water towers, enclosures with bottom access, and railcar tanks.

Understanding Gas Detection Bump Tests and Calibration

To help ensure the accuracy of all monitoring and detection equipment, calibration should be performed regularly. For clarification, the International Safety Equipment Association (ISEA) has issued an instrument calibration position statement concerning confined spaces.

According to this document, “a bump test or full calibration of direct-reading portable gas monitors should be made before each day's use in accordance with the manufacturer's instructions, using an appropriate test gas.” If an instrument fails the bump test, it must be adjusted via full calibration before use.

The primary reason for regular instrument calibration is to help prevent inaccurate gas concentration readings that could potentially lead to injury or even death of workers and other personnel.

Sirius® PID Multigas Detector

- Combination multigas detector with PID (photo-ionization detector) for situations where volatile organic compounds monitoring is required.
- Tremendous flexibility: one PID and four gases in one instrument provide detection of hundreds of chemicals.
- Loud, attention-grabbing alarms include piercing audible horn and multi-directional LED lights to alert users of alarm conditions.
- Easy calibration: simple one button calibration provides simplicity necessary for new users.

Description	MSA Part #	Grainger Item #
Deluxe LEL 4-gas lithium ion PID, calibration kit, lamp cleaning kit, data log	10052511	1TBB7
Lamp Cleaning Kit	10049691	1TBBC6
Replacement lamp	10049692	1TBC5
Calibration gas 34L: isobutylene	10048279	2TEY3
Calibration gas 34L: LEL, O ₂ , CO, H ₂ S	10048280	2TEY1
Calibration Kit, Model RP	477149	1RG86

ALTAIR® and ALTAIR Pro Single Gas Detectors

- Both models can continuously monitor for a single gas; carbon monoxide, hydrogen sulfide, and oxygen.
- Both models offer a triple-alarm system featuring bright flashing LEDs, piercing audible alarm, and vibrating alarm to help ensure that no alarm condition goes unnoticed.
- Both models are extremely resistant to drops and impacts and are rated to IP67 protection levels for dust and water ingress.
- Both models feature simple one-button operation and two-year warranty.
- **ALTAIR Single-Gas Detector** will operate for over two years maintenance free. Unit is always on once activated.
- **ALTAIR Pro Single-Gas Detector** uses replaceable batteries and sensors and features large backlit display.

Description	MSA Part #	Grainger Item #

Gas Detection Selection Guide for OSHA Compliance

Issue: Workers in many industries may encounter potentially hazardous gases in confined space environments every day. Appropriate portable gas detection instruments are used to monitor confined space atmospheres.

Application: Multigas and single-gas detectors are used to monitor immediate hazardous gas environments.

Recommendation: Grainger offers reliable and easy-to-use gas detection instruments to monitor for hazardous gases and oxygen deficiency commonly found within confined space applications.

Four Common Gas Hazard Types:

Type of Monitoring	The Purpose	The Hazard	Possible Source of Hazard
Personal protection	Worker safety	Toxic gases	Leaks, fugitive emissions, industrial process defects
Explosive	Worker and facility safety	Explosions	Presence of combustible gases/vapors due to leaks, industrial process defects
Environmental	Environmental safety	Environmental degradation	Oil leaks into sewers or lakes, acid gas emissions
Industrial process	Process control	Process malfunction	Possible fault or other process error

Recommended Gas Detection Solutions

ALTAIR® 4X Multigas Detector

- Personal protection
- Potentially explosive atmosphere monitoring

ALTAIR 5X Multigas Detector

- Potentially explosive atmosphere and environmental monitoring

Sirius® PID Multigas Detector

- Potentially explosive atmosphere and environmental monitoring

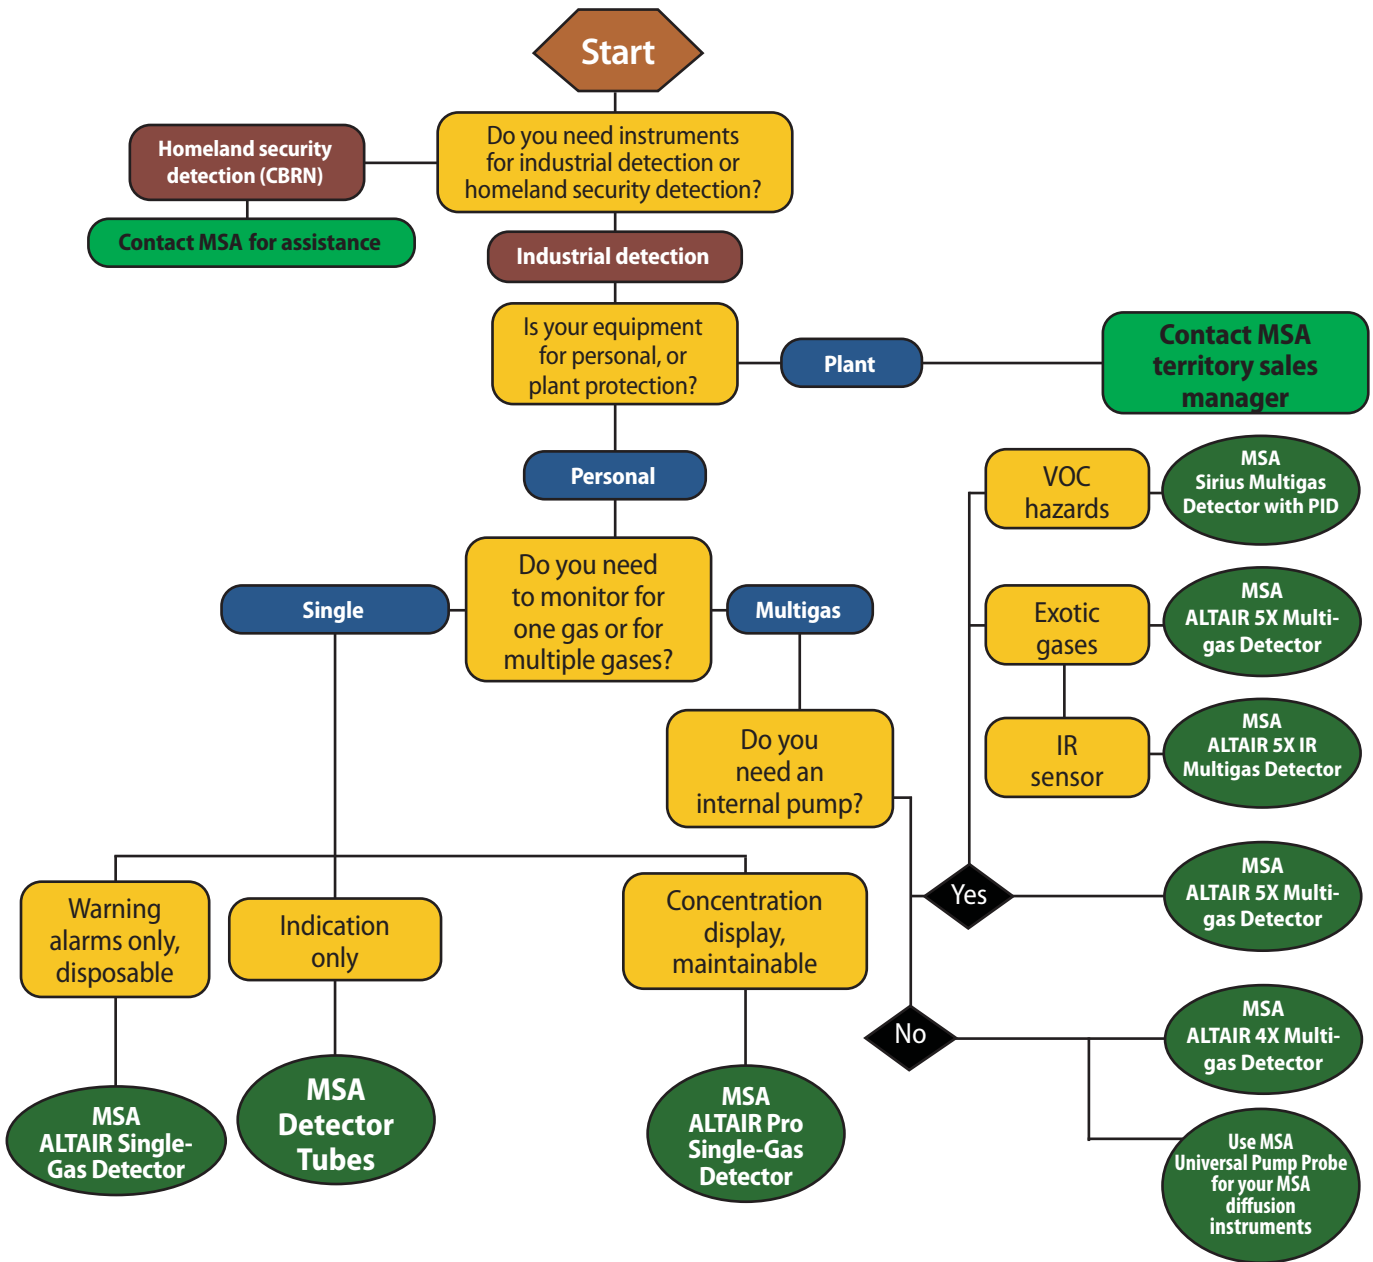

ALTAIR Single-Gas Detector

- Personal protection
- Potentially explosive atmosphere monitoring

ALTAIR Pro Single-Gas Detector

- Personal protection
- Potentially explosive atmosphere monitoring

Occupational Health and Safety

Fall Arrest Products for OSHA Compliance

Issue: When implementing an engineering control to a fall protection hazard is not feasible, a fall arrest system must be implemented. A complete fall arrest system must be provided to employees for employers to be OSHA-compliant.

Application: Specifically, OSHA outlines a fall arrest system to include an anchorage or **tie-off** point, a body harness and a connecting device. This product should meet OSHA requirements and be ANSI-compliant.

Recommendation: MSA offers a complete line of fall protection products through Grainger to provide customers the tools to be OSHA-compliant. In addition, MSA offers services such as product training and compliance support to better understand fall protection program requirements.

Components of a Comprehensive Fall Arrest System:

When engineering control is not feasible, a fall arrest system must be implemented.

- A fall arrest system is designed to limit injury in the event of a fall.

Three components of a fall arrest system:

- A: Anchorage or tie-off point. Anchorage means a secure attachment point for connecting devices.
- B: Body harness. Body harness includes straps to distribute fall arrest forces over thighs, pelvis, waist, chest, and shoulders; is also a means for attaching a connecting device.
- C: Connecting device (lanyard/locking snaphook); includes lanyard with snaphook that allows each end to connect body harness to an anchorage point.

OSHA 29 CFR 1926.502 requires that a personal fall arrest system requires (but is not limited to):

- Limit maximum arresting force on employee to 1,800 lbs.
- Be rigged such that employee can neither free-fall more than 6' (1.8 m), nor contact any lower level.
- Bring worker to a complete stop and limit maximum deceleration distance an employee travels to 3.5'.
- Body belts are not acceptable as part of a personal fall arrest system.

ANSI Z359 standard for Personal Fall Arrest

- ANSI Z359.0-2007: Definitions
- ANSI Z359.1-2007: Fall arrest systems, subsystems and components
 - For a lanyard, the snaphook and carabiner gate strength will increase to 3,600 pounds.
 - Twin-leg fall arrest lanyards will be tested to 5,000 pounds at the junction point where the lanyard legs come together.
- ANSI Z359.2-2007: Minimum requirements for a comprehensive, managed fall protection program
- ANSI Z359.3-2007: Work positioning and travel restriction systems, subsystems and components
- ANSI Z359.4-2007: Assisted-rescue and self-rescue systems, subsystems and components

Fall Protection Solutions

Workman® Full Body Harness

The Workman Full Body Harness provides comfortable protection using lightweight components and durable webbing.

- Abrasion-resistant, strong, durable webbing harness for easy donning and adjustment.
- Comfortable yellow polyester webbing for increased visibility.
- Web retainer collars keep excess webbing neat and include integral load indicator.

Size	Style	Description	MSA Part #	Grainger Item #
Standard	Vest-type	Chest/Qwik-Fit™ Leg Buckle, back D-ring	10072479	3PUC5
X-Large	Vest-type	Chest/Qwik-Fit Leg Buckle, back D-ring	10072480	3PUC6
Standard	Vest-type	Chest/tongue leg buckle, back D-ring	10072487	3PUC3
X-Large	Vest-type	Chest/tongue leg buckle, back D-ring	10072488	3PUC4
Standard	Vest-type	Chest/tongue leg buckle, back/hip D-ring	10072491	3PUC1
X-Large	Vest-type	Chest/tongue leg buckle, back/hip D-ring	10072492	3PUC2

(Meets all applicable OSHA regulations, ANSI Z359.1-2007 and A10.32 standards, certified to CSA Z259.10-06.)

Workman Construction Full Body Harness

Workman Full Body Harness provides many features for comfortable, long-term wear.

- Features integral back pad and tool belt plus shoulder pads.

Size	Style	Description	MSA Part #	Grainger Item #
Standard	Vest-type	Chest Qwik-Fit Buckle, leg tongue buckle, back/hip D-ring	10077571	23Z792
X-Large	Vest-type	Chest Qwik-Fit Buckle, leg tongue buckle, back/hip D-ring	10077572	23Z793

(Meets all applicable OSHA regulations, ANSI Z359.1-2007 and A10.32 standards, certified to CSA Z259.10-06.)

Workman Shock-Absorbing Lanyards

Workman Shock-Absorbing Lanyards are lightweight with a low-profile body. Shock absorber includes clear, durable protective label cover to increase service life and allow for easy inspection.

Description	Connection	MSA Part #	Grainger Item #
Single-leg/tie-back	LC	10072472	3WNJ5

Workman Roofers' Fall Protection Kits

- Comprehensive kit was created for roofing fall protection.

Harness	Accessories	MSA Part #	Grainger Item #
Vest-style, standard size, Qwik-Fit Leg Buckle	25' rope, trailing rope grab, roof anchor, bucket	10074475	23Z869
Vest-style, standard size, tongue-buckle leg	25' rope, trailing rope grab, roof anchor, bucket	10074477	23Z870
Vest-style, standard size, Qwik-Fit Leg Buckle	25' rope, manual rope grab, bag	10074480	23Z871
Vest-style, standard size, tongue-buckle leg	25' rope, manual rope grab, bag	10092959	23Z872

Thermatek® Harness Fall Protection Kits

- Thermatek Harness offers Kevlar/Nomex blend webbing for resistance to chemicals, weld splatter and other high heat exposures.
- Thermatek Shock-Absorbing Lanyard features burn-resistant Tuffweld protective cover (superior to Nomex).

Harness	Accessories	MSA Part #	Grainger Item #

Fall Protection PFLs and SRLs

Workman PFL Lanyards

- With solid design and fast-acting brake mechanism, you can be confident that the Workman Personal Fall Limiter (PFL) will be there for you when you need it most.
- Durable, engineered thermoplastic housing for decreased weight.
- Rugged, impact-absorbing protective bumpers for added durability.
- Integral load indicator to alert user that unit has been involved in a fall.

Single-leg PFL Lanyards

Description	Connection	MSA Part #	Grainger Item #
10' web line	1" carabiner/LC	10093357	23Z877
12' cable line	1" carabiner/36C	10104793	23Z878
10' web line	1" carabiner/LC	10104797	23Z879

Dyna-Lock® SRL Lanyards

- Dyna-Lock Self-Retracting Lanyards (SRL) are fast-acting fall arresters that limit free-fall distance, deceleration distance and fall arrest forces while allowing user freedom of movement.
- Dyna-Lock SRL is ideal for climbing applications where vertical mobility is needed.

Description	Length	MSA Part #	Grainger Item #
Galvanized wire rope	30' (10 m)	506202	23Z884
Galvanized wire rope	50' (16 m)	506204	23Z885
Galvanized wire rope	95' (30 m)	506208	23Z886

Galvanized wire rope	30' (10 m)	10006470	23Z889
Galvanized wire rope	50' (16 m)	10006468	23Z890
Galvanized wire rope	95' (30 m)	10006464	23Z891
Nylon web	20' (6 m)	10006447	23Z892
Stainless steel cable	20' (6 m)	10017933	23Z893

(Meets all OSHA requirements and ANSI A10.32 standards.)

Confined Space Equipment

- Simple setup procedure hastens process, promotes correct usage.
- Lynx® Rescuer allows for non-entry rescue of confined space entrant.
- Lynx Hoist provides lifting, lowering and positioning of personnel and materials.
- System can be used for leading edge work, maintenance and entry/retrieval from manholes, tank cars, silos, tanks, vaults, pits, vats, and other confined space applications.

Description	MSA Part #	Grainger Item #
Entry kit with tripod, Lynx Hoist and Rescuer, carry bag	10105271	23Z894
Entry kit with tripod, Lynx Rescuer, carry bag	10117244	23Z895

Temporary Horizontal Lifelines

- Designed for easy installation and removal. System can be mounted to any suitable 5,000 lb-rated anchorage.
- Highly visible 12-strand red rope will not buckle and minimizes fall distance due to low stretch properties.
- Includes integral energy absorber, 5/8" black nylon kernmantle rope, two cable anchor slings, storage bag.

Description	MSA Part #	Grainger Item #
Horizontal lifeline for two workers, 30' rope	10013152	23Z873
Horizontal lifeline for two workers, 60' rope	10013153	23Z874
Horizontal lifeline for two workers, 100' rope	10019085	23Z875
Horizontal lifeline for two workers, 200' rope	10022827	23Z876

(Meets all OSHA requirements and ANSI A10.32 standards.)

Occupational Health and Safety

Public Safety Products

Issue: Law enforcement, security, military, and other similar personnel operate in potentially hazardous environments where ballistic head protection, hearing protection, and respiratory protection is necessary to help keep them safe. Included are threats to the head from ballistic, i.e. firearm weapons, high noise environments from loud impulsive sounds, and respiratory protection from potential CBRN threats.

Application: Law enforcement personnel (police, SWAT, and sheriffs' departments), campus security personnel (colleges, universities, industry, and corporations), corrections department officers (DOCs), U.S. embassy security, first responders, and military personnel depend upon ballistic helmet protection. They also require the use of protective products such as high-noise hearing protection muffs and respiratory protection with CBRN gas masks.

Recommendation: Grainger offers MSA's market-leading products for head, hearing, and respiratory protection. These innovative and often patented products offer uncompromised protection with maximum comfort for use in potentially hazardous environments.

Millennium® Chemical-Biological Masks

Millennium Chemical-Biological Masks combine high performance, customized fit, comfort, and cost efficiency. CBRN canisters provide protection from chemical, biological, radiological, and nuclear contaminants. NIOSH-approved.

- Dual-canister mount allows for weapon sighting from either shoulder
- Standard mechanical speaking diaphragm
- Wide field of vision
- Integral drinking tube

The ESP® II Communication System is designed for use with Millennium Masks. This compact battery-operated unit clearly amplifies and projects the voice, allowing speech to be heard clearly even in high-noise areas. The unit clips onto the respirator facepiece diaphragm housing.

Description	MSA Part #	Grainger Item #

Millennium, medium	10051287	4DA80
Millennium, large	10051288	4DA81
CBRN canister	10046570	4DA82
ESP II Communication System	10026265	4DA83

Product Features

Supreme Pro™ Hearing Protection integrates with ballistic helmets to provide unobtrusive communication and hearing protection in areas of loud impulsive sounds, such as areas where weapons may be fired. This system protects your hearing while enabling clear radio communications.

- Cup-mounted microphones enhance user situational awareness, providing hearing protection while allowing users to hear ambient environmental sounds
- Communication system operates as either as a stand-alone headset, with the ACH, or with a gas mask
