Make Safety Simple

MSA simplifies inspection and safety compliance management (ISCM) with RFID and Field ID

MSA has integrated Field ID into its newest fall protection harness: the EVOTECH Construction Harness.

What is Field ID?

Problem: *Visual Identification*
Solution: *Electronic Identification (RFID and barcodes)*
- Identification is the first step in compliance
- Traditional serial numbers are prone to human error
- Electronic identification proves that an asset was identified

**Problem:** *Clipboard and Pen in the Field*
Solution: *Field ID on Mobile Devices*
- Clipboard and pencil is highly inefficient
- Field ID Mobile provides you with:
    - real-time safety status on each piece of equipment
    - proper inspection procedure
    - instant identification
    - one-click inspections
    - GPS location to prove someone was there

Problem: *Filing Cabinets Full of Paperwork*
Solution: *Field ID Web*
- Field ID Web provides you with:
    - reporting & scheduling
    - 24/7 real-time access to safety data
    - readiness for an accident or audit
    - records can't be forged or backdated – everything is time stamped

1. RFID

Identifying equipment is the first step in any inspection. Traditionally, a serial number is visually read, a practice that's highly prone to human error. Radio Frequency Identification (RFID) chips are embedded within our EVOTECH Harness line to prove that an asset was identified, significantly reducing human error. RFID chips are similar to bar codes, but are more durable and provide more functionality than traditional barcoding.

2. Mobile Handhelds

Traditional inspections are conducted using pen and paper, which is highly inefficient. Mobile handhelds completely digitize the inspection process. Just point the handheld unit toward a harness, and software will walk you through proper inspection criteria with simple clicks. Never take a clipboard out to the field again!

Field ID Mobile provides you with:
- real-time safety status on each piece of equipment
- proper inspection procedure
- instant identification
- one-click inspections
- GPS location to prove someone was there

3. Web-Based Safety Management

Field ID's core is a powerful Web-based safety management system. Field ID's intuitive Web-based system acts as your organization's one-stop safety portal for your scheduling, reporting, and administrative needs.

Benefits

Eliminate Paperwork
Field ID allows you to completely eliminate unmanageable paperwork. Use the Web instead to access reports and inspections 24/7.

Monitor Real-time Safety Status
Know your safety regulation compliance at all times. Email reminders and a real-time safety dashboard are tools at your disposal to help ensure your compliance.

Save Time and Money
Streamline your inspection and safety compliance process. Think of Field ID as the difference between email vs. traditional mail. Conduct more inspections in less time, completely eliminating costly back-end administration and data duplication.

Manage Your Equipment
Use Field ID to manage all of your safety requirements, not just fall protection. Field ID allows you to manage all types of equipment including cranes, rigging, gas detection, and more.

Simplify Safety Compliance – One-Click Inspections!
Field ID's one-click inspections help to eliminate the guesswork of safety compliance. Field ID guides you through the inspection process, suggesting inspection criteria based upon your jurisdiction and equipment.

Feature	Field ID	i-Safe 3.0	ESP
100% Web-Based	**Yes**	No	No
Compatible with UHF, HF, LF	**Yes**	Yes	No
Supported by a Software Co.	**Yes**	No	No
Online and Onsite Training	**Yes**	No	No
Multiple RFID & Tag Options	**Yes**	No	No
Safety Network Sharing	**Yes**	No	No
Easy to Use & Simple Setup	**Yes**	No	No
Free Option	**Yes**	No	N/A

Other Field ID Features
- Mobile access
- User interface customizations
- Use third-party handhelds
- Multi-user capabilities
- Conduct inspections on the Web
- Not limited to Microsoft Windows

- Does not require expensive handhelds
- Phone support packages available
- Supported by award-winning third-party software company
- One-click inspections
