

SENSCIENT ELDS™

HYDROGEN SULPHIDE SPECIFIC OPEN PATH DETECTOR

Open path hydrogen sulphide (H₂S) gas detectors are used to monitor for fugitive emissions, protect personnel, and warn of plant failure by detecting leaks faster and over a larger area than is feasible with point detection. These devices are typically located around the perimeter of a plant, process or storage area; or positioned in close proximity to specific items of a plant, that pose a real risk of gas escape: e.g. compressors, pump sets, pressure reducers, valves and pipe flanges.

ADVANCED SENSING TECHNOLOGY

HARMONIC
FINGERPRINT™

SimuGas™
SAFETY INTEGRITY

Harmonic Fingerprint™ Much like forensic fingerprint ID, the Harmonic Fingerprint™ uses multiple identifiers in the absorption analysis of the target gas to eliminate false alarms.

SimuGas™ Only the Senscient ELDS™ can check and record functional tests automatically everyday.

Zero Maintenance The system does not require consumable sensing elements or calibrations, significantly reducing operation costs for time and materials spent on maintenance.

Tuneable Lasers Class 1 eye safe lasers penetrate thick fog, heavy rain, and snow further than differential infrared based detectors.

Bluetooth® Stay Connected. Work Smarter. Bluetooth wireless technology for faster commissioning and troubleshooting while keeping workers out of harms way.

Lock Cell A real target gas sample eliminates laser drift and maintains Harmonic Fingerprint™ lock continuously all day.

Single point verification
Low false alarm rejection

Four point verification
Highest false alarm rejection
