HART MODULE

Material: Cast 316 Stainless Steel

HART MODULE TERMINAL BOARD

POWER

SIGNAL

POWER

SHIELD

Clearance Holes for 1/4-20 screws (4 Places)

NOTES:

1. Module part numbers indicated are specific to module configurations.
2. Module part numbers should be placed in a L-shaped configuration.
3. The module should be placed in a L-shaped configuration and signal connections should be made at the module.
4. The module should be placed in a L-shaped configuration and shield connections should be made at the module.
5. The module should be placed in a L-shaped configuration and signal connections should be made at the module.
6. The module should be placed in a L-shaped configuration and shield connections should be made at the module.
7. The module should be placed in a L-shaped configuration and signal connections should be made at the module.
8. The module should be placed in a L-shaped configuration and shield connections should be made at the module.
9. The module should be placed in a L-shaped configuration and signal connections should be made at the module.
10. The module should be placed in a L-shaped configuration and shield connections should be made at the module.
11. The module should be placed in a L-shaped configuration and signal connections should be made at the module.
12. The module should be placed in a L-shaped configuration and shield connections should be made at the module.
13. The module should be placed in a L-shaped configuration and signal connections should be made at the module.
14. Certified stopping plugs or certified entries shall be installed at all threaded entries at installation.

HART MODULE ONLY INCLUDED UNDER CERTAIN ATO CONFIGURATIONS:

INSTALLATION OUTLINE, ULTIMA XE WITH XIR SENSOR

Module Part Numbers: 10090128, 10090127

Module Part Numbers: 10047562

Material: Cast 316 Stainless Steel
