

left/RIGHT[®] Muffs

Feature	Benefit
Patented headband design is based upon anatomical studies	Headband's breakthrough design simulates the head's curves to provide a comfortable and stable fit, balancing muffs with ear cup angle. Headband adjusts up and down to provide custom fit for different head sizes.
Left ear cup is different than right ear cup	Dedicated right and left ear cups are designed to fit your ears and are shaped differently from front to back. Ear cups fit all sizes and ear shapes. Precise fit provides maximum loud noise protection using minimal cup size.
Adjustable ear cups	Provides personal, adjustable fit for superb user comfort. Ear cups can be adjusted individually, allowing close coverage even when ears are not symmetrically placed on head.
Adjustments are easily made	A few intuitive adjustments to headband or ear cup make left/RIGHT Electronic Ear Muffs feel as if they are custom-designed for your head.
Tested to ANSI S3.19-1974	Multiple rigorous tests exposed test subjects to various sound frequencies using all headband and helmet-mounted models to help ensure that you have the protection you require.
Cap-mounted or headband ear muffs	Ear muffs can be worn on your head or on your helmet with the same comfort and adjustability.
CutOff Pro	Level-dependent function allows you to hear ambient sounds such as warning signals, moving vehicles, and other important information. Enables face-to-face communications within noisy areas while protecting the user's hearing. Sound reproduced through speakers is suppressed to a maximum of 82 dB.
FM Pro Radio Muff	Listen to music while maintaining required hearing protection. Balanced, secure fit ensures that your headband stays put during your activities.
Dual Pro	Combines the features of the CutOff Pro with the FM Pro, allowing users to hear ambient sounds and listen to music while while maintaining hearing protection.
AM/FM Radio Muff (dial-style)	Listen to music while maintaining hearing protection. Balanced, secure fit ensures that your headband stays put during your activities.
Thin, flexible noise reduction rings	A hygiene kit designed for each model ensures that muffs stay clean and comfortable. Replace ear seal rings every six months.
Three attractive colors	Some model ear cups are available in clean white, popular blue, or visible yellow.
