Information Bulletin

Bulletin Type: Service/Technical Information

Topic: Heavy Axle End Fitting Part Number Interchanges

Affected Models: All Drive Axle Yokes & Flanges

To better serve our customers and the market place, Dana Corporation's Heavy Vehicle Technologies and Systems Service (HVTSS) division is pleased to announce the following changes to select axle end fitting part numbers and the process for ordering these numbers.

Effective immediately, we have changed the part numbers of select axle end fittings to better align with the numbering scheme with all other Spicer® end fittings. Attached is a cross reference chart from the old part numbers, formerly used by our Henderson, Kentucky axle facility, to the new numbers. The "Henderson type" part numbers will no longer be recognized by our system. Please make these part number changes in your system and begin ordering using the new numbers immediately.

Certain Henderson numbers were identified as obsolete and have been superseded to a "half round" configuration end fitting. To incorporate this new configuration it is necessary to replace the universal joint kit on the mating end of the driveshaft and will also require the appropriate strap and bolt kit identified in the last column of the cross reference chart. This change will allow the driveshaft to properly mate with the new end fitting.

Additionally, oil seals were often included with end fitting that were shipped from the Henderson facility, but will no longer be included. Oil seals are now required to be ordered separately using their respective original OEM part numbers.

Finally, these part numbers must be ordered through our Holland, OH Customer Service department. The Henderson, Kentucky Customer Service department has been consolidated into the Holland, Ohio group.

Information regarding these changes was also communicated via Service Bulletin JOI-PNI-198.

Original Dana Henderson Part-No.	Now Sold as Driveshaft Part-No.
