

Spicer Blue-Coated Performance U-Joints

When it Comes to U-joint Performance, Blue is the New Black.

How did we make Spicer® u-joints for Dana axles even tougher? We gave them the blues. We covered our u-joints with a high-performance, high-durability blue coating. Then we subjected them to the corrosive effects of 45 hours in a mud bath. Tests results prove that the beauty of the Spicer® Blue-Coated Performance U-joint is more than skin deep—its beauty stands up to the elements!

The Product

Spicer® Blue-Coated Performance U-joints (SPL®55-3X equivalent) underwent a multi-step painting process which included cleaning with a zinc phosphate solution and the application of a high-performance primer, followed by a top layer of our signature blue coating.

The Test

We subjected the Spicer® Blue-Coated Performance U-joint —and a competitor's product — to durability testing, consisting of a 45-hour mud bath to simulate harsh road conditions.

The Results

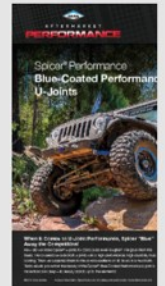

The image to the right shows the clear, visible difference between the Spicer® Blue-Coated Performance U-joint and the competitor's product after 45 hours of mud bath testing.

Spicer U-Joint	5-760X	5-7166X	5-1350X	SPL55-3X	SLP70-3X
Blue U-Joint Equivalent	5-760XC	SPL30-7166XC	SPL30-1350XC	SPL55-1480XC	SPL70-1550XC
