

BATTERIES

MARINE STARTING SERIES

- *Delivers high starting current quickly to crank larger engines up to starting RPMs.*
- *Maintenance-free design means never having to add water and delivers more powerful performance.*
- *Flush cover design for secure fit and easy installation keeping cover clean and acid-free.*
- *Stainless steel terminals and nuts for ease of installation and corrosion-free connections.*
- *Calcium-calcium alloy provides minimal water loss and very little gassing ensuring a truly maintenance-free battery with plenty of starting power.*
- *Convenient carrying handle for ease of transportation and installation.*
- *Vibration resistant design handles demanding marine use extending battery life.*
- *Continuous-cast, full-frame, calcium alloy negative grids enhance efficiency of current flow and resist vibration damage for trouble-free service. There are no sharp grid wires to cause shorts.*
- *Exclusive, deep-pocket envelope separators virtually eliminate shorting, improve reliability and extend service life. Narrow ribs reduce separator "corrode thru."*
- *Specially formulated electrolyte uses demineralized water for significantly reduced water loss and gassing.*
- *Straight-through-the-partition cell connectors shorten current path while increasing starting power delivering more power-per-pound.*
- *Over 250 quality control checks ensure long life, maximum performance, and a battery you can trust.*
