

## MOTORCYCLE, PWC, ATV, & SNOWMOBILE

# BATTERIES

- Advanced absorbed glass mat technology provides a spillproof design.
- Ideal for power sport applications such as motorcycles, ATVs, personal watercraft and snowmobiles.
- Batteries come ready for use with no Initial activation or filling with acid required.
- Built to last longer with vibration resistant design and tough external construction.
- Molded top and side connection terminal design provide ease of installation. Flexible design can be installed in almost any position (upside down is not recommended).
- Completely sealed valve-regulated design eliminates acid spills and prevents terminal corrosion.
- Microfiber glass separators have extremely low electrical resistance for higher capacity.
- Maintenance-free construction eliminates the need to add water.
- Requires less charging time than conventional batteries.
- Lower electrical resistance provides higher discharge rates.
- High freeze-resistance offers longer battery life.
- Charging: Use a good, constant potential, voltage-regulated charger. For 12-volt AGM batteries, charge to at least 13.8 volts, but no more than 14.6 volts at 77°F (25°C). Do not charge in a sealed container.
- Over 250 quality control checks ensure long life, maximum performance, and a battery you can trust.
