

CYBERSECURITY SERVICES

Predict | Prevent | Persist

OUR MISSION

At Canon Solutions America, providing you with resources to help you secure your business is important to us and we are here to tell you that you don't have to do it alone. We collaborate with and assist you with getting in touch with experts in cybersecurity who provide the kinds of training, guidance, and consulting services to help address your concerns and help put you at ease.

CONSULTING SERVICES

Confer with expert consultants who can help you evaluate the readiness of your organization to help mitigate a data breach. This service may be used to help you prepare for a compliance audit, or help you get through some of the steps that may be needed for you to qualify for a cybersecurity insurance policy.

VULNERABILITY ASSESSMENT

Find out where you stand. Let our experienced cybersecurity solutions providers scan your entire infrastructure looking for gaps in your security posture.

PENETRATION TESTING

Very similar to a vulnerability assessment, a penetration test can aid you in validating your host and network configurations and provide you with a list of vulnerabilities existing on in-scope systems. Penetration testing can be configured to go an additional step to test and exploit vulnerabilities which may exist in your systems with respect to access to your email systems, firewalls, routers, VPN tunnels, web servers, and other devices.

EDUCATION AND TRAINING

When it comes to avoiding data breaches, your employees can be your weakest link or your best defense. Whether you need to conduct an executive training or a general employee awareness and readiness workshop for everyone, confer with our expert consultants to see how they can help.

VIRTUAL CISO (VCISO)

Not every business has the budget to hire a full time Chief Information Security Officer (CISO); however, you would be hard pressed to find anyone who would dispute the critical role they play. Now you can take advantage of having access to a virtual CISO in a number of ways: Remote phone support, or as a retained professional who can provide you with guidance when the need arises.

INCIDENT RESPONSE

A strong Computer Security Incident Response Plan (CSIRP) can help minimize the duration and impact of a security breach. Canon Solutions America can put you in touch with security consultants who can offer you guidance on steps you can take to help your organization prepare to respond quickly and effectively to a security incident.

DIGITAL FORENSICS

With any active cyber threat, it is critical to understand the source and full extent of the network security breach in order to effectively respond and take meaningful steps toward eradicating its presence in your environment.

ACS Agile Cybersecurity Solutions

"Think Quickly ... Act Decisively"
