TREAD™ PAVERS ELEVATE THE CHARLOTTE CORPORATE CAMPUS

Daltile's TREAD™ 2cm Porcelain Pavers proved to be the ideal solution for a major corporate campus development in Charlotte, North Carolina. While the design team initially considered concrete pavers, once our 2cm porcelain pavers were introduced, the difference was clear. The porcelain option delivers a cleaner, more sophisticated look that matches the architect's goal of "bringing the inside outside," while also outperforming concrete in durability and long-term performance.

The Daltile team's support went far beyond design, offering expert guidance on installation methods and technical specifications. Rooftop wind load concerns were resolved with our pedestal system, delivering both stability and flexibility. By providing clear, confident answers, the team demonstrated that our pavers were not only the most attractive option but also the most reliable long-term solution.

The standout feature of the project was our Delegate Light Grey DL26 in a 20 x 40. This colorway offered the perfect balance of modern style and versatility, with its soft grey tone creating a clean, sophisticated look across the expansive rooftop terrace. The larger 20 x 40 size emphasized smooth, uninterrupted lines, enhancing the sense of openness while maintaining a sleek, uniform surface. The neutral palette of Delegate Light Grey also paired seamlessly with both the building's interior finishes and the surrounding landscape, reinforcing the design goal of creating a cohesive "inside-to-outside" connection.

The success of this project was made possible by a coordinated Daltile team effort. Sales and specifications leaders worked closely with the architect and general contractor to answer technical questions, provide on-site mockups, and demonstrate the ease of the tray and pedestal system. Fast pricing support and quick turnaround on materials ensured confidence at every stage.
