Leading the way with comprehensive solutions for precision healthcare

GE Healthcare has the only complete end-to-end Theranostics offering, including setup logistics and preparation as well as advanced diagnostic and treatment evaluation and monitoring—and the potential for new developments each year.

That's right … every year, GE targets to bring something new in Theranostics care. With partnerships around the globe, we are constantly developing therapy options for a variety of cancers, such as lymphoma, melanoma, neuroendocrine tumor, and prostate cancer. Aided by discoveries in artificial intelligence and the evolution of precision medicine, the future will bring more targeted treatments. Efficient and sensitive molecular imaging can provide clinicians with the quantitative data needed to monitor treatments and help determine their effectiveness.

A pathway for hope

GE Healthcare's comprehensive approach to Theranostics is the key to better disease evaluation and monitoring. Personalized throughout the care pathway, GE Healthcare's diagnostic, therapeutic, and monitoring capabilities helps lead to better outcomes at every step of the cancer journey. Using specific targeting compounds for both imaging and therapy, this transformative approach is the future of cancer treatment, giving hope and the potential for better quality of life.

An all-inclusive partnership

We understand the complexity of Theranostics, and we are there for you in every step of your Theranostics journey. For those considering a complete Theranostics clinic, you'll require an intricate setup with specialized staff and specially designed equipment. And even if you cannot fully invest at this time, careful preparation and planning are key to eventual successful implementation. GE Healthcare has the end-to-end expertise to help you navigate these challenges, with our ability to help you design and orchestrate a clinic with our expansive, leading-edge products as the backbone. Regardless of the size of your investment, working with GE Healthcare can help you improve your facility's efficiency, reduce staffing concerns—and become a leader in the Theranostics space.

A complete portfolio of Theranostics solutions

With a century of innovation in imaging technologies, GE Healthcare can help you provide exceptional patient care. That experience has put us at the forefront in the Theranostics journey, where we are the only single provider to offer a complete portfolio of Theranostics solutions. There's our radiopharmacy laboratory solutions, which are designed to support Theranostics. GE Healthcare's Pharmaceutical Diagnostics (PDx) division is the only medical equipment manufacturer with the ability to develop and supply highly specialized pharmaceuticals to clinical and research organizations throughout the world. Our advanced PET/CT scanners let you quickly perform assessment scans. And then there's StarGuide, in a class of its own as it expands the horizons of nuclear medicine through accurate quantitation, helping you make personalized care decisions and treatment response assessments at the heart of Theranostics.

An investment today … positioned for tomorrow

Theranostics is the future of nuclear medicine. It is most prominently used in the treatment of prostate cancer, the second most diagnosed cancer among men worldwide and the fifth leading cause of cancer death in men.* That's why establishing a Theranostics clinic now will put you at the forefront of this growing market—and keep you on the leading edge of nuclear medicine, with the latest molecular imaging products and the solutions of tomorrow. Not quite ready to invest in a complete facility? Then work with GE Healthcare to treat patients closer to home, choosing the products that will grow with you as your Theranostics needs expand.
