

Anchorage Connector Extension

Technical Brief FP-PC002

Proper Use of Anchorage Connector Extension: PN 505233

The Anchorage Connector Extension is intended to extend your anchorage point vertically downward and allow the user to connect to an anchorage point that may otherwise be out of reach.

The O-ring on the lanyard is intended to be used as any other anchorage connector for an energy-absorbing lanyard, restraint/positioning lanyard or self-retracting device.

WARNING: Under no circumstances should the cable lanyard be wrapped around a beam and tied back onto itself.
