

Anchorage Connectors Capacity

Technical Brief FP-PC004

Anchorage Connectors for workers over 310 lbs

MSA fall arrest anchorage connectors, when used according to the manufacturer's instructions, are approved for use with MSA fall protection equipment rated for workers above 310 lbs capacity. MSA anchorage connectors are capable of resisting a 5,000 pound static load and are capable of supporting MSA personal fall arrest systems that limit fall arrest forces to 1,800 pounds or less. Specially marked harnesses, shock absorbing lanyards and self-retracting lanyards that are designed for workers that exceed 310 pounds (up to a 400 pound maximum), will reduce fall arrest forces below the 1,800 pound limit.
