

Dyna-Glide Mounting Angle

Technical Brief FP-PC018

Dyna-Glide System Approval at up to 35 degrees from vertical

MSA has tested and approved the Dyna-Glide fall arrester, PN 506277 and ladder rail system for installation and use between vertical and 35 degrees from vertical in the direction away from the climber such that the climber is above the rail. This does not apply to slopes toward the climber where the rail would be above the climber or to slopes to either side.

This letter is a supplement to MSA Dyna Glide system instruction manual, PN R621501 available at www.MSAafety.com (search "dyna glide" then click on "product literature and user information"). All other selection and installation parameters should conform to those instructions.
