GLOBE. ATHLETIC GEAR FOR FIREFIGHTERS.™
Globe invented turnout gear over 130 years ago. Today we still deliver the most advanced, best-fitting, and longest-lasting protection by listening to our customers, creating breakthrough designs, and applying the engineering skills of the nation’s most trusted manufacturer.

Our employees and our distributors all share a passion for building “Athletic Gear for Firefighters” in their choice of styles, materials, and options. And no matter what challenges tomorrow’s firefighters face, they can be sure that Globe will continue to be there to protect them.

Globe Manufacturing Company is founded in Lynn, MA.

Globe receives a patent for a waterproof coat using an outer shell, a waterproof barrier, and a thermal lining—the same system still used today by all manufacturers of turnout gear.

Globe is the first to use 3M™ Scotchlite™ reflective trim to add visibility to its turnout gear.

Globe introduces DuPont NOMEX® inherently flame-resistant fabric.

Globe is a charter member of the National Fire Protection Association, creating the first NFPA 1971 Standard for Protective Clothing for Structural Fire Fighting, Globe becomes the first to comply with this new standard for every turnout sold.

Globe brings ergonomic design to turnout gear by launching the revolutionary GX-7™, which rapidly becomes the most popular turnout gear in the fire service.

The fourth generation of the founding Freese family takes over the ownership and management of Globe. Gef (left), Rob (middle), and Don (right).

Globe is the first manufacturer of turnouts to achieve ISO 9001 Certification.

The Globe Guard™ System, in combination with the most innovative turnout gear from Globe, provides firefighters the gold standard in helping reduce exposure to toxic substances without impeding performance. Globe and MSA are committed to delivering premium performance solutions and supporting scientific research to help address long-term firefighter health and safety. Continually improving turnout gear specifications is one of the many steps necessary for departments to help reduce exposure to toxic substances for their members.

OTHER CONSIDERATIONS
On the jacket, a front closure with a zipper inside and hook and loop outside is recommended to help reduce exposure when properly secured.

On the pants, the addition of the inside gusset helps to reduce exposure when the hook and loop fly closure is properly closed.

At the jacket and glove interface, elasticized, adjustable sleeve wells constructed of GORE® CROSSTECH® black moisture barrier with wristers sewn to the liner is recommended to help keep toxic substances from entering the sleeves when the arms are raised.

Components of the Globe Guard™ System are also available with Neoprene.
