

Solventum™ 360 Encompass™ Audit Expert System Inpatient PreView Review

- Offers an inpatient preview review workflow to catch coding issues at the point of coding
- Suggests actionable edits to address specific risk areas early in the coding process
- Initiates second-level review (when required) in the Solventum™ 360 Encompass™ System workflow
- Records data throughout the coding and review session for education, tracking and reporting

360 Encompass single platform advantage

As part of the Solventum 360 Encompass Audit Expert System, Inpatient PreView Review uses customized, actionable edits specific to the organization to address risk areas at the point of coding. Edits are triggered in the 360 Encompass system and automatically routed for secondary review, when specified.

Inpatient PreView Review's flexible, intuitive design helps organizations address unique coding challenges and generate more accurate patient records.

Integrated, actionable editing at the point of coding

Integrated within the Solventum 360 Encompass System workflow, Inpatient Preview Review gives coders the means to resolve potential issues early on, keeping small issues from becoming large ones.

Inpatient PreView Review's actionable edits address coding pain points that align with an organization's coding policies and procedures. These edits provide coders with guidance and education as they are coding, so they can correct issues before they become problems. Actionable edits that are used during a coding session are also recorded for tracking, trending, routing and reporting purposes.

Second-level reviews

The Inpatient PreView Review workflow supports edit-driven second level reviews, or additional reviews as specified. It is integrated within Solventum 360 Encompass and includes:

- Communication tools for reviewers and coders
- Visual indicator of suggested changes
- Information tracked for further reporting

Inpatient PreView Review at a glance

- Integrated within the Solventum™ 360 Encompass™ System
- Actionable edits provide rules and logic-based edit resolution at the point of coding, based on risk areas specific to the organization
- Second-level reviews are automatically initiated as designated by the organization within Solventum™ 360 Encompass™ System
- Results are stored for education, tracking, trending, routing and reporting purposes accuracy by working alongside the coding team to achieve long-term success.

Organisation boosted by Custom and Actionable Edits

The Actionable and Custom Edits function, is available in the Solventum™ 360 Encompass™ System, allowing organizations to create coding edits unique to their needs by incorporating these into the coding and auditing workflow.

- Edits occur in the coder workflow instead of in the EHR, which helps reduce audit time and improve accuracy
- Edits can be tailored to meet the requirements of payer contracts that are specific to a facility
- Custom Edits support on-the-job training by incorporating essential checkpoints into the coding workflow based on the organization's unique coding needs
- Depending on the Custom Edit's severity ranking (set by the organization), the coder can be notified about specific hospital needs and prevented from completing a record until the edit is resolved, thus increasing accuracy and reducing rework
