

Solventum™ 360 Encompass™ System platform

- Revenue cycle management system integrating computer-assisted coding, clinical documentation improvement, quality metrics, auditing and analytics, in one platform.
- From capture to code improving workflows with accurate, compliant data that impacts real-time patient care.
- Powered by Solventum's grouper and reimbursement logic, combined with NLP and Solventum's advanced clinical intelligence.

A decade of innovation. A future of transformation.

For more than 10 years, hospitals used 360E to automate coding workflows, using our expert guided artificial intelligence (AI) to realize both cost and time saving benefits.

The Solventum 360 Encompass platform includes comprehensive workflows and automation for coding, CDI and audit solutions, as well as integration with computer-assisted physician documentation (CAPD) workflows.

Coding and CDI teams can adapt to new technologies, monitor performance, build coding and CDI competencies, and improve business processes with the aid of Solventum's consulting services.

The quest to reduce costs while protecting quality

Now more than ever, hospitals need a technically advanced and tightly integrated revenue cycle management system. It's the best foot forward against shifting reimbursements, qualified coder shortages and changing government regulations. So, how can hospitals simultaneously reduce costs, remain compliant and protect - or even enhance - the quality of patient care?

With the introduction of computer-assisted coding in 2012, Solventum has built a robust platform covering key layers of the revenue cycle business. As our client's technology needs progress, so does Solventum 360 Encompass. Today, the platform is an evolving collection of revenue cycle management modules that work together to help health care organizations stay in control of cost, compliance and quality. Modules include:

- **Solventum™ 360 Encompass™ Computer-Assisted Coding (CAC) - Computer-assisted and automated workflows for inpatient and outpatient.**
- **Solventum™ 360 Encompass™ Clinical Documentation Integrity (CDI) - Computer-assisted and automated CDI workflows.**
- **Solventum™ 360 Encompass™ Audit Expert System - Inpatient PreView review and code auditing workflows.**
- **Solventum™ 360 Encompass™ Autonomous Coding System – Zero-touch, fully automated coding workflow for qualifying visits.**

Coding and CDI teams: A united front

Once siloed and unaligned, coding and CDI teams are now a force to be reckoned with. Working concurrently in one system, Solventum 360 Encompass eliminates silos, reduces duplication and fosters collaboration and insights across care settings. Coders can rely on Solventum 360 Encompass for coding excellence and top features for optimal auto-suggestions. CDI staff can count on the system to surface quality indicators to help drive complete and accurate clinical documentation.

Gearing up for an autonomous experience with confidence

When organizations are ready for further coding automation, Solventum is ready to help. Our technology can take codes into a more autonomous experience by auto-dropping user's historically accurate and confident auto-suggested codes into the Solventum Coding and Reimbursement System (CRS) coding pane for final code set completion. This effectively frees up coders' time to focus on complex codes, shifting focus away from repetitive, simple coding tasks.

Close the gaps with Solventum consulting services

Our Solventum technology is backed by a team of consultants with specialized credentials and decades of health care experience. Our consultants provide analysis and data informed recommendations, in addition to personalized support, education, training, workflow redesign and supplemental staffing.

On premise or in the cloud

Utilizing the power of the Solventum Cloud Platform, all the same features available for Solventum 360 Encompass on-premises can now be delivered in the cloud. The agility offered by cloud solutions can help organizations shift focus away from time consuming IT maintenance and delivery, and more on business outcomes. Organizations can decrease total cost of ownership in areas such as hardware, software, maintenance and support. This secure and flexible option is integrated with other Solventum solutions.

Powerful components

Solventum develops features and functionality that can be used across the Solventum 360 Encompass platform, based on licensing. These features expand the confines of traditional roles and locations, bringing teams together to work from one source, in one common system. Some of these expanded features and capabilities include:

- Expert clinical content-driven AI
- Proven grouping and reimbursement methodologies
- Auto-suggested coding and CDI workflows
- Worklist prioritization for both CDI and coding teams
- Concurrent coding to establish a working diagnosis related group (DRG) and continue to update the code set through final coding
- Custom edits to create unique edits that fit every need
- Solventum Code Confidence, auto-drops historically high precision autosuggested codes into Solventum CRS
- Solventum Advanced CDI Prioritization, automated and customized logic to identify high priority cases and opportunities
- 360 Encompass Systems identifies potential quality flags concurrently helping organizations ensure accurate value-based care.
