3M™ 360 Encompass™ System

The advanced solution for all your clinical documentation integrity, clinical coding and quality needs.

The future of clinical coding solutions is here

As Health Information Departments continue to innovate and adapt to an ever-changing landscape, 3M has continued its efforts to provide customers not only the markets most trusted coding solution in 3M™ Codefinder™ Software but in recent years also helped shape the move to concurrent Clinical Documentation Integrity with its 3M™ Advanced CDI services program.

With growing adoption of Electronic Medical Records (EMRs), now more than ever, hospitals are voicing the need for a technically-advanced and tightly-integrated clinical coding, grouping and CDI solution that leverages their existing technology to streamline and prioritise workflow allowing teams to work smarter not harder.

How do hospitals ensure coded data is complete sooner for monitoring against performance targets and for payment, while maintaining clinical documentation integrity and data accuracy on a background of clinical coder shortages and increased workload?

How can hospitals reduce costs, improve productivity, remain data compliant and enhance the quality of patient care simultaneously?

By deploying the 3M™ 360 Encompass™ System...

This solution is a collection of applications that work together to help hospitals streamline processes, capture complexity, ensure appropriate reimbursement, promote data compliance and make data informed decisions. With decades of experience and interaction with customers, 3M has developed a system that redefines what is possible from a clinical coding solution to truly help hospitals improve efficiency through computer assisted coding and find new ways to impact improvement in quality of care for patients through clinical documentation integrity.

3M Health Information Systems

300+

active industry partnerships*

20 countries

use 3M Health Information Systems products

60 million+

clinical documents pass through our systems every month*

750+

ANZ region hospitals use 3M clinical coding solutions

30+ years

of working with Australian and New Zealand Hospitals

1,450+

facilities send data through our 3M™ Clinical Discovery Engine every day*

*Global data

How does the 3M™ 360 Encompass™ System work?

1. It accesses and aggregates clinical content for the complete episode.

The 3M 360 Encompass System provides a centralised workspace for all electronic documents and processes required for CDI review and coding, with an intuitive user interface. This eliminates the need to access multiple systems and minimises the time spent searching through information.

2. It organises and stores healthcare data as codes and clinical concepts, then applies artificial intelligence to enable efficiencies and effective decision making.

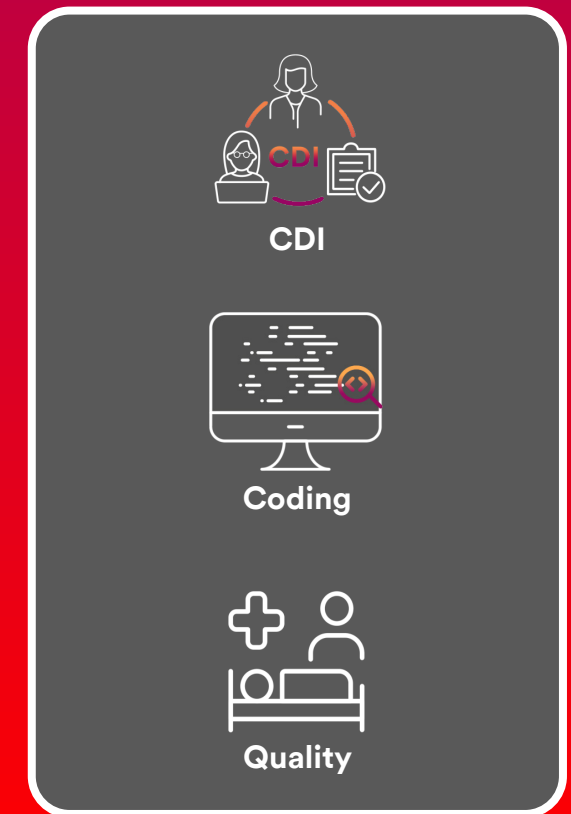

The 3M 360 Encompass System leverages 3M's natural language understanding and processing technology to:

- identify documentation and coding integrity opportunities
- enable efficiencies through computer assisted coding
- accurately reflect the complexity of the episode
- ensure the most appropriate DRG assignment for reimbursement

3. It delivers value for health system reporting, efficiency and quality measurement, providing clinical and financial insights to focus priorities and decisions.

The 3M 360 Encompass System helps to connect the CDI, coding and quality teams, enabling them to work within the one system.

Benefits of the 3M™ 360 Encompass™ System

- Redefines the workflows and elevates the roles of CDI specialists and clinical coders.
- Improves efficiency and quality by enabling greater collaboration between CDI specialists and coders within real-time concurrent workflows.
- Produces accurate and complete coded data with the help of computer-assisted CDI and coding workflows.
- Monitors patient care with embedded quality indicators such as hospital-acquired complications (HACs).
- Helps future-proof your organisation's CDI and coding capabilities by providing a platform for future functionality, including auto-suggested coding, auto-suggested CDI queries and healthcare analytics.

- ✓ Computer assisted CDI workflow
- ✓ Computer assisted coding workflow
- ✓ Quality indicators (HACs)
- ✓ Business analytics reporting

Investing in your future

Over 100 years ago, the 3M Company was founded on creating innovative solutions to persistent problems, and for more than 35 years, 3M Health Information Systems has been applying that same innovative spirit to health information management.

When you partner with 3M, you not only get an army of experts and a comprehensive healthcare data set working for you, but you also position your data systems and teams toward the future. We work with more than 5,000 healthcare organisations, both providers and payers, to deliver cutting-edge software and services that help them succeed.

Let us do the same for you.
