

Skin protection

for irritated skin

**3M™ Cavilon™
No Sting Barrier Film**

protects intact and damaged skin for a long time - keeping it from liquids, irritants and friction. The clinically proven, unique skin protection is applied thinly as a liquid, dries quickly and leaves behind a wafer-thin, water vapour-permeable acrylic terpolymer film.

3M™ Cavilon™ Advanced Skin Protectant

is a high endurance skin protectant for covering and protecting intact or damaged skin. It forms a durable, thin elastomeric transparent film. The film adheres to dry, moist or wet skin surfaces (i.e. partial thickness lesions). It remains intact despite continuous or repeated exposure to moisture and/or corrosive irritants.

**3M™ Cavilon™
Durable Barrier Cream**

offers a unique, long-lasting protection against body fluids and at the same time moisturises the skin.
