

## Confidence for you. Comfort for your patient.

Clinpro<sup>™</sup> Glycine Prophy Powder

# Comfortable cleaning for your patients.

You take special care with your preventive measures to ensure your patients' comfort and continued oral health. Now there's a way to enhance your prophy procedure and advance their care.

Clinpro<sup>™</sup> Glycine Prophy Powder from 3M is a gentle prophy powder that has the longest clinical history of glycine air-polishing powders used clinically since 2001.

## Clinpro<sup>™</sup> Glycine Prophy Powder

## Benefits for you and for your patients:

- For supra- and subgingival plaque biofilm removal
- Low abrasiveness on dentin, root surfaces and restorations
- Proven to effectively remove biofilm in periodontal pockets
- Removes light to moderate extrinsic stains
- Gentle on restorations, orthodontic brackets, implants and sealants
- Fast and easy procedure
- Pleasant tasting
- Can be used in commercially available air-polishing equipment
- Effective for areas difficult to reach with paste

Subgingival plaque biofilm removal by spraying Clinpro™ Glycine Prophy Powder along the gingival margin with a 30° to 60° angle in a steady motion to facilitate subgingival cleaning up to 5mm pocket depth.

Unlike conventional air-polishing powders such as sodium bicarbonate, Clinpro glycine prophy powder is made with soft and gentle water-soluble glycine technology, for a thorough but gentle cleaning—even subgingivally. That means:

- A fast and comfortable cleaning for your patients and confidence for you
- Safe removal of biofilm from soft root surfaces, dental restorations, implants and around orthodontic brackets
- Gentler on dental tissues than conventional procedures using currettes and scalers

Around orthodontic brackets

On implants and restorations

Around gingival margins

5mm

# Fast and effective biofilm removal for you.

Clinpro<sup>™</sup> Glycine Prophy Powder is indicated for the removal of biofilm on supra- and subgingival tooth surfaces-during routine professional tooth cleaning and for supportive maintenance in periodontitis and peri-implant disease therapy.

The gentle air-polishing procedure with Clinpro glycine prophy powder results in a decrease in pocket depth, and is clinically proven to remove biofilm in 3-5mm periodontal pockets as effectively as hand instruments.

#### **Proof it works**

#### **Reduction of Bacteria** (n = 23 Patients)

#### More Gentle, Less Abrasive on Dental Surfaces

Treatment Type	Dentin Surface		Composite Surface	
Clinpro <sup>™</sup> Glycine Prophy Powder	Before	After	Before	After
Currette	Before	After	Before	After
Ultrasonic Scaler	Before	After	Before	After
<b>Sodium Bicarbonate Powder</b> (Sodium bicarbonate is not indicated for subgingival use)	Before	After	Before	After
