3M ESPE Scotchbond Universal Adhesive is a single-bottle adhesive solution that combines versatility with excellent strength, speed, and convenience for effective performance. It offers high bond strength with 1 simple application process and a quick 35-second adhesive application time.

Scotchbond Universal adhesive bonds to all surfaces, including enamel, dentin, glass ceramic, zirconia, noble and non-precious alloys, and composites—without additional primer. In combination with Scotchbond Universal DCA Dual Cure Activator, Scotchbond Universal adhesive is compatible with all resin cements, core build-up materials, and even self-cure composites. With Scotchbond Universal adhesive, dentists now have an easy-to-use, single-bottle solution that provides excellent results for all surfaces in total- or self-etch mode.

The unique chemistry of Scotchbond Universal adhesive optimizes the ratios of the 3M ESPE proprietary Vitrebond copolymer, HEMA, and water. This allows for rehydration of the collagen network and formation of a distinct hybrid layer whether dentin is kept moist or dry. The result is reduced technique sensitivity, consistent bonding, and virtually no postoperative sensitivity in both self-etch and total-etch applications.
