**Inpatient CDI**

## Solventum Automatic Impact
## Real time, in-workflow CDI impact

Measuring clinical documentation integrity (CDI) impact is essential for CDI programs that aim to meet and exceed financial and quality targets. Without an easy way to understand the true impact of the work, CDI programs are effectively trying to navigate without directions.

**With Solventum, accurate CDI impact calculations are automatic, real time and built into your workflow.**

However, accurately determining CDI impact is complex. Operational metrics such as query rates and turnaround time are helpful but cannot quantify actual financial or quality value. Older methods of calculating impact often lead to over-inflated estimates, and when unreliable data is presented to leadership, trust erodes. These pitfalls have forced CDI teams using these older methods to manually track and analyze code-level data to calculate and verify outcomes, making the process cumbersome and laborious.

## It's different with Solventum CDI. Accurate CDI impact calculations are automatic, real time and built into your workflow.

**Automatically capture financial and quality impact:** Capture changes to reimbursement, weights and complication, comorbidity/major complication or comorbidities (CCs/MCCs), shifts in risk of mortality (ROM), severity of illness (SOI) and Elixhauser, hospital-acquired conditions (HACs), potentially preventable complications (PPCs), patient safety indicators (PSIs), geometric length of stay (GLOS), and custom impact fields important for your goals. Solventum Automatic Impact calculates impact for both Medicare severity diagnosis related group (MS DRG) and all patient refined diagnosis related group (APR DRG) groupers.

**Dramatically streamline reconciliation:** Manual reconciliation is extremely time consuming for CDI and coding teams. Solventum Automatic Impact vastly simplifies and accelerates reconciliation by capturing baseline code sets, tracking anticipated and actual results, automatically updating impact calculations as the case evolves, and creating CDI action items for follow up if "actual result" code(s) are not in the HIM/coding code set at the time of final coding.

**Get the full picture:** CDI teams increasingly partner with a wide variety of stakeholders, from traditional partners such as clinicians and coders, to quality and care management teams. Solventum Automatic Impact helps CDI specialists track and quantify the value of this important work.

**Understand and act upon causal factors:** Improving CDI outcomes requires visibility to both overall impact and the factors that drive it. Solventum Automatic Impact enables ongoing CDI improvement by reporting both final and incremental impact, quantifying missed opportunities, showing query attribution related to impact, and providing one-click access to the applicable code set.

**Benefit from impact reporting with the highest level of accuracy and integrity:** In partnership with customers, Solventum Automatic Impact has been refined and enhanced for the highest accuracy and integrity. Calculations use your facility's blended rates for maximum relevance.

Solventum Automatic Impact is just one of the ground-breaking features of Solventum's high power inpatient CDI solutions, which are trusted by thousands of leading health systems and hospitals. Other next-level capabilities include clinically driven prioritization, code comparison and reconciliation, non-provider interactions, in-workflow query delivery, computer-assisted physician documentation (CAPD) nudges and more.

Want to learn more about how your CDI program can benefit from automated impact and Solventum's inpatient CDI solutions? Contact your Solventum representative, call us at 800-367-2447, or visit us online at **go.solventum.com/CDI.**
