Solventum™ Grouper Plus Content Services (GPCS)

- Access Solventum's comprehensive grouping, editing, reimbursement, quality and pay for performance content

- Enhance the value of various applications that process claims, calculate reimbursement and payment, analyze data, evaluate compliance and more

- Leverage a versatile web-based platform that offers multiple data processing options to support scalability and usability for diverse organizational needs

High security standards

Through our purpose-built platform, Solventum GPCS is Federal Risk and Authorization Management Program (FedRAMP®) and GovRAMP™ Authorized. Healthcare organizations working with federal and state governments can use Solventum GPCS knowing it has gone through a thorough security and risk assessment.

FedRAMP   GovRAMP AUTHORIZED Software as a Service (SaaS)

The challenge: Staying up to date with frequent changes

In an increasingly complex and dynamic regulatory, payment and pay for performance environment, healthcare providers and software partners are challenged to implement and maintain current and comprehensive grouping, editing and reimbursement content. This content is constantly evolving and can change frequently. Staying up to date is critical; however, it is labor intensive and requires specialized skills.

In addition, increased expectations and demands on information technology (IT) departments can take a toll given the resources and time required for implementation and ongoing maintenance. Organizations are looking to newer technologies to allocate resources more effectively and efficiently.

The solution: Solventum expert content in the cloud

To support organizations faced with intense IT resource pressures and time constraints, Solventum can process data at scale and deliver rich regulatory and proprietary content with greater timeliness and less maintenance than an on-premises system. Solventum GPCS provides up to date, secure access to grouping, editing, reimbursement, quality and pay-for-outcomes classifications to healthcare providers, third party software partners, payers, consultants and analytics companies around the world.

Customers can choose from flexible workflow options that include web services, industry standard interfaces and a cloud environment. Solventum GPCS can be licensed with a variety of inpatient, outpatient and population health grouping methodologies and numerous state and payer payment systems. **Review this webpage** for more information.

Key features and benefits

Flexible workflow — Solventum GPCS content can be accessed and leveraged in the following ways:

- **Claims processing web service** — Receive grouping, editing and reimbursement results to embed into another application via an asynchronous or synchronous representational state transfer application programming interface (RESTful API) with .json or .csv data format.

  - **Standardized implementation** — Industry-standard REST web services with open authorization (OAuth) are used to integrate Solventum's content into customers' applications using the programming language of their choice. Comprehensive API documentation includes Swagger.

  - **Low maintenance** — Backward-compatible interfaces minimize the amount of ongoing development required.

- **Interactive user interface** — Enter claims data manually into a web browser to process an individual patient record and generate grouping results, estimated reimbursement and edits. View results on screen or in a report.

- **Batch user interface** — Process many records at a time using a file-based approach (supported file formats include .json and .csv).

Comprehensive and timely content — Public and proprietary grouping, editing, pay-for-outcomes classification and reimbursement, quality and payment content are available.

High security standards — Solventum GPCS is assessed annually by third party organizations to maintain compliance with standards including FedRAMP, GovRAMP and SOC 2+. We follow current National Institute of Standards and Technology (NIST) guidelines from special publication 800-53, which includes more than 300 security and privacy controls for information systems and organizations to meet federal and state security requirements. Data is encrypted in transit and at rest where it is stored as specified by the customer.

Integration with Epic Resolute®

Solventum GPCS can integrate with Epic Resolute to perform grouping, editing and reimbursement calculations for the Medicare outpatient, ambulatory surgical center (ASC) and end-stage renal disease (ESRD) prospective payment systems, as well as Medicaid and commercial prospective payment systems based on the Solventum™ Enhanced Ambulatory Patient Groups (EAPGs) Classification System. This integration keeps information systems up to date with federal and state regulations while minimizing administrative burden.

Helping your bottom line and timeline

With Solventum GPCS, your organization can access timely and business critical financial, compliance and quality content in your workflow — with minimal use of IT or technical resources. End users and customers benefit from staying current with regulations. Additionally, software partners, consultants and analytics firms can focus on their core products and businesses.
