Oral Health
During Orthodontic
Treatment

Keep your teeth and gums healthy!

Three things you can do to help make sure your smile looks and feels great.

- Brush thoroughly after each meal and floss at least once a day
- Follow your orthodontist's instructions
- Ask your orthodontist about products Solventum has developed that can help protect you from white spots.

Remember, to get the very best results, it's important to do your part - from the start

Did you know...

Patients undergoing orthodontic treatment have a higher risk of developing white spots, cavities, gingivitis and having bad breath.

Here's why

When you wear braces or clear aligners, it's easy for food to get trapped on your teeth. And when food is left on your teeth, it helps create plaque bacteria and acid—which can lead to unpleasant conditions you do not want.

Take extra care to avoid white spots.

Acidic foods, like soda, orange juice and coffee, pull minerals out of your teeth, leaving white spots—which can turn into cavities. To help protect your smile, ask your orthodontist about treatments that can be applied in the office or special toothpastes you can use at home.
