

Solventum™ Outpatient CDI Solution Capturing complete patient risk and quality profiles

- AI-powered coding and clinical models automatically identify and surface patient risk factors and quality capture opportunities
- Clinician workflows and insights that streamline documentation, capture patient risk and quality conditions in real time
- End-to-end solution that helps prevent revenue and quality leakage to drive success in both value-based care and traditional payment models

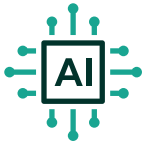

The challenge: Navigating the shift to outpatient CDI

The shift from inpatient care to outpatient settings continues to be a necessary adjustment for healthcare organizations. Data suggests that the outpatient care volumes are expected to increase by 18% by 2035, moving more procedures to ambulatory surgery centers, specialty clinics, and other outpatient care settings. This transition is driven by advances in healthcare cost savings initiatives, physician specialties spanning multiple care settings, evolving payment models and technology advances. This continued shift presents multiple challenges for organizations adapting to this transition.

- **Healthcare organizations** in risk-based contracts risk revenue loss if they miss quality, cost or outcome targets. Success hinges on effectively managing high-risk patients, closing data gaps and transitioning to team-based, longitudinal care. This requires collaboration among physicians, care teams and coding specialists.
- **Revenue cycle teams** face increased complexity, needing accurate risk-adjusted coding and real-time quality metric capture while navigating multiple payment models like fee-for-service and capitated payments.
- **Clinicians** must address the growing demands of risk-based contracts by documenting chronic conditions and coordinating care across specialties and community resources, all within limited appointment times.

The solution: Innovation driven by AI, compliance and experience

Solventum Outpatient CDI Solution is a comprehensive, AI-powered platform designed to optimize risk and quality capture while improving patient and population management by surfacing clinical risk, condition and care insights for each patient. It integrates advanced diagnosis, suspect condition, population, clinical risk and quality models, to provide physicians, documentation specialists and coders with a complete and accurate profile of a patient's chronic conditions and key quality factors as well as actionable clinical insights. Solventum Outpatient CDI Solution delivers integrated workflows and provides real-time patient insights to clinicians, streamlines patient data for CDI reviewers and risk coders, and reduces the documentation burden to support patient care and revenue integrity.

A comprehensive, AI-driven outpatient CDI and population health management process

Clinical care and documentation teams can collaborate on the patient chart and monitor risk factors and coding, using these distinct advantages:

- **AI-driven intelligence:** Integrates clinical and claims data to uncover gaps in patient quality and risk profiles, prioritizing cases so reviewers can focus on those with the greatest impact.
- **Automated pre-visit reviews:** Automated pre-visit review process delivers prioritized condition opportunities and evidence directly to reviewers.
- **Enhanced clinical insights:** Provides clinical evidence sheets with historical summaries for quick context and ongoing care gap tracking.
- **Pre-claim exception review:** Identifies discrepancies between documentation and coding before claims are submitted, reducing risk and improving audit readiness.
- **Advanced analytics:** Enables performance monitoring and measurement, delivering ROI insights and supporting long-term success in value-based care.

Solventum Outpatient CDI Solution delivers a smarter, more connected approach to outpatient documentation and population health. By combining AI-powered insights with automated workflows, it equips care teams to act earlier, document more accurately, and close gaps that impact quality and risk. With built-in analytics and pre-claim safeguards, organizations gain the clarity and control needed to improve outcomes, strengthen financial performance, and lead in value-based care.
