

## Driving clinical and financial outcomes: Proactive population management

Population management is no longer optional – it's a strategic imperative for organizations navigating value-based care. For managed care and health systems engaged in risk-based payment models, proactively identifying and engaging high-risk and rising-risk individuals is essential to:

Capture accurate risk adjustments

Close care gaps

Improve chronic disease outcomes

Meet performance benchmarks  
on key quality measures

Actionable insights help drive efficient resource allocation, targeted interventions and sustainable growth, keeping organizations clinically effective, financially strong and compliant in a system that rewards outcomes over volume.

Effective population health programs depend on timely, complete and accurate clinical data needed to stratify risk, target interventions and measure results. Without it, organizations risk:

- Underestimated risk scores that can reduce revenue
- Unidentified care gaps and that lead to avoidable complications
- Incomplete quality metrics that undermine performance incentives and regulatory compliance

## Solventum™ Outpatient CDI Solution: A strategic enabler

This comprehensive AI-powered solution helps address these challenges by supporting complete and accurate patient profiles that deliver:

- Accurate risk patient profile adjustment through comprehensive chronic condition capture
- Real-time pre-visit summaries and risk capture guidance
- Exceptions reviews that identify discrepancies, presenting audit-ready documentation that protects revenue and compliance
- Actionable insights for targeting interventions and managing population-level trends

With Solventum, documentation accuracy becomes a strategic facilitator, empowering organizations to improve patient outcomes, protect revenue and excel in a value-based care environment that rewards both quality and efficiency.

## Solventum Outpatient CDI Solution drives population health impact through:

| Features  | Population health impact  |
|---|---|
| <b>Pre-visit risk and quality targeting:</b> Automation and prioritization pre-visit reviews surface patient condition summaries and risk and quality profiles  | Highlights condition summaries and diagnosis targets from past claims and notes, enabling proactive identification of high-risk patients                      |
| <b>Clinical evidence for risk and quality capture:</b> Evidence sheets and condition summaries provide immediate clinical context for each patient, supporting accurate clinical validation of chronic conditions | Delivers consistent and validated data, supporting both risk adjustment accuracy and quality measure compliance, enabling more precise patient stratification |
| <b>Real-time EHR integration at point of care:</b> Seamless workflow integration delivers patient clinical insight summaries and risk capture guidance directly in the EHR during patient-clinician interactions  | Reduces missed diagnoses, ensuring that risk scores and quality measures reflect the true patient population  |
| <b>Post-visit coding exception review:</b> Pre-claim exception flags documentation and code mismatches before claim submission  | Prevents loss of risk and quality capture due to incomplete documentation, safeguards against audits and protects value-based care revenue streams            |
| <b>Advanced analytics and program performance dashboards:</b> ROI and population insights deliver real-time visibility into program impact, risk capture rates and care gap closure                               | Enables leadership to monitor population-level trends, measure intervention effectiveness and adjust strategies for long-term sustainability                  |

### From documentation to outcomes: A holistic approach

Solventum Outpatient CDI Solution goes beyond just improving documentation; it is a strategic population health tool for healthcare organizations. By capturing the complete patient narrative, it provides the process needed to enhance risk management and quality of care, enabling targeted interventions that improve patient outcomes and ultimately support organizations in achieving sustainable success within value-based care programs.

### Let's drive population health success together
