"The StreamOne® exports for billing on the monthly basis now form a key process internally of how we bill our customers. **The data is always right, then we can bill our customers straight away** off the back of that data.

It really means that we're billing now as soon as we can. We're **getting that cash into the business earlier**, and it's reducing across the payment terms our cash negative flow because we've got that customer invoice data, and we can push that out as soon as possible."

ON **STREAMONE®** BILLING

"We've hit the over $1M revenue mark this year, which we've never hit before, and I think an element of that was really tidying up the operational piece. Sales are motivated to sell Microsoft because it's easy to transact through StreamOne®.

The expertise and the drive from TD SYNNEX to skill up on Microsoft changes and new product lines like Copilot has contributed to some really big pushes with marketing and sales enablement to keep that momentum of how much we've grown in the past year going."
