

USG ENGINEERED GRID

Design | Pre-Construction Service

USG Engineered Grid is built for architects, interior designers, and contractors. Our team clearly defines the ceiling before it reaches the jobsite—delivering precise designs and eliminating guesswork. The result? Clear scope, accurate installs, and the confidence of having USG on your side.

USG Engineered Grid fast-tracks your project by supporting you early. Through layouts, shop drawings, seismic coordination, and digital tools, USG streamlines the path from design to install.

From start to finish, every project is supported by a dedicated project manager with hands-on support.

SERVICES

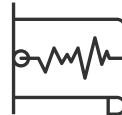

DESIGN

Manufacturer-defined layouts

PRE-CONSTRUCTION

Drawings & coordination
